10. BRIEF SUMMARY OF SIGHTING Witness stated that objt appeared like a large star, except that it changed colors. Objt remained in same area all during observation, and witnesses went out about an hours later to see if it could be seen, and it was still there. Characteristics of objt are similar to an astronomical body, such as a star or planet. Very bright star Sirius was to W of witnesses location at about 10° elev. However, being so close to horizon it would appear to be higher than it actually was. There were other bright stars to SW; however, they were not as bright as Sirius. It is therefore concluded that objt sighted was probably star Sirius.			11. COMMENTS

10. BRIEF SUMMARY OF SIGHTING= objts appearing as bluish-white lights proceeding at same rate of speed fm NW-SE. Disappeared in hazy sky. Observed at about 70° elev.				11. COMMENTS Probability of these objts being insects was ruled out due to sighting taking place in late Oct. Description of appearance of objts is not unlike that for high flying jet a/c. Altitude, distance, wind direction and fact that car windows were probably up could account for absence of noise. Fact that sighting occurred in vicinity of Wright-Patterson AFB, a relatively dense air traffic area tend to substantiate this conclusion.
