| 10. BRIEF SUMMARY OF SIGHTING Round objt about like star, only brighter; yellow-orange as glow fm fire, disappeared to E. Viewed in August and September. |  |                                                                                                                                                                                                       |  | 11. COMMENTS Probably moon and bright star Regulus (Leo) magnitude 1.3. Moon is on or just below horizon and is probably distorted by atmospheric refraction. Adding to confusion of witness in near occultation of star Regulus. Earlier sightings by witness were probably due to either eclipse of moon on 26 Aug or occultation of Aldebaran on 1 Sep 61.                                                                                                                                                                                                                                              |  |
