DATE 5 Aug 1962

At 2045 hrs. 1 Aug 1962, I was watching the southern sky for the expected appearance of a B-58, whose vapor trails could be readily seen. Right beside the star Arcturus (I think) I saw, what appeared to be another star, but moving toward me.

As it moved thru the sky, almost directly overhead, I was satisfied that it was the Echo satellite, and watched it move toward the NNE. At about 35° above the NNE horizon it began veering to the right or toward the east and continued in an easterly direction until it faded from view.
