1. Reference the attached letter from [REDACTED] requesting evaluation of two photographs taken in early October 1962. This letter is forwarded to your office for whatever action you deem necessary.
2. According to photo analysts, the most probable cause for the spots on these photos is defects on the negatives. A more complete analysis would require examination of the negatives.

September 18, 1963

Dear Mr. [REDACTED]

The photographs you forwarded have been examined by photographic analysts in our laboratories who say the most probable cause for the spots was defects in or on the negatives. Without a complete examination of the negatives from which these prints were obtained, it is impossible to arrive at a more complete analysis.

Sincerely,

MASTON M. JACKS
Major, USAF
