I had called
the astronomer at the

"Adler," planetarium, over
here and he said that in his
opinion it might have been atmospheric
conditions. And he had recieved many
such calls (on the phone) as mine.

My telescopes power
was 100 at highest. However I now
have a telescope which its' highest
power is 266. And my lens on
the 100 power telescope were clean
and spotless, at the time of
viewing.

Dear Sirs,

I would like
to report some "Unidentified Flying -
objects."

It was in the year
of 1963, and the month was August.

On August of 1963,
Friday night at about 10:00 p.m. All
of our neighbors were sitting outside
and a few boys and myself were
looking at the moon through my
telescope when I suddenly saw
between 10 + 15 dark circular objects
traveling across the moon at a
fantastic speed. My boyfriends had
also seen them also.

I also called the
astronomer of the "Asler", planetarium.
And I have left out one
thing, that is that it could have
only been, if possible, atmospheric-
conditions, although visibility had been
good.
