BASE CONTROL TOWER SAW NOTHING AT THIS TIME.

THE POLICE, STATE POLICE, AND SHERIFF'S OFFICES IN CLOVIS AND SURROUNDING AREAS WERE CONTACTED AS TO ANY REPORTINGS IN THEIR AREAS. ALL WERE NEGATIVE.

K. POSITION, TITLE AND COMMENTS OF PREPARING OFFICER:

ALLEN K. COLLINS, 2ND LT., ASSISTANT WING INTELLIGENCE OFFICER,
27TH TFW.

COMMENTS:

ALL THE SIGHTINGS INDICATED THAT THE OBJECT WAS TRAVELING IN A POLAR ORBIT. THE 2 SEPERATE SIGHTINGS OCCURED AT APPROXIMATELY 90 MINUTES APART MAKING NO SOUND POSSIBLY INDICATING THAT THE OBJECT WAS AT A GREAT DISTANCE FROM THE OBSERVERS. IT WAS ASSUMED BY SOME TO BE ABOUT 1 MILE AWAY, THIS COULD HAVE BEEN CAUSED FROM THE FACT IT OCCURED AT NIGHT WITH NO VISIBLE REFERENCES TO GUAGE THE DISTANCE CORRECTLY.

THIS OBJECT COULD POSSIBLY HAVE BEEN A SATELLITE RE-ENTERING THE ATMOSPHERE FROM A POLAR ORBIT; OR A METERORITE. NEITHER CAN BE PROVEN BECAUSE NO PHYSICAL EVIDENCE HAS BEEN FOUND, AND NO ONE HAS REPORTED ANYTHING FALLING.

ADVANCE COPY TO DIA, & NIN.

FALL OF FOAM IN MEXICO

On December 12, 1963 at 10:00 a.m. Customs Interventor Ignacio Baz was called on the phone by the customs officer at Gate Two in Agua Prieta, Mexico. Because he was busy supervising the check-through of cattle he could not respond, but 10 minutes later, upon receiving a second call from the gate and an urgent message to come as soon as possible, he got into his car and, stopping by home, picked up his camera and proceeded to Gate Two.

When Baz reached Gate Two he was greeted by Inspector Amber Gordillo, who filled in the details about his calls. At 10, he said, a huge, white ball-shaped object had come in from tree top level and landed about a hundred yards southwest of the gate. Ten minutes later when Gordillo called Baz the second time, he reported that two more of the strange things were approaching.

When he finally reached Gate Two, the two objects, about 6 feet in diameter, and not precisely spherical in shape, were literally "bouncing" across the soft ground of a freshly plowed field about 100 yards from the gate. Their bounces took them between 3 and 6 feet off the ground. The field bordered on the Agua Prieta (dirty water) river and a range of stubby mesquite growth. Ignacio Baz sloshed through the mud of the field in pursuit of the strange balls. A strong north wind was blowing and the objects were being driven further southwest along the ground. When they reached the mesquite growth they began to tear apart on the growth. Although their repeated bounces along the ground apparently had no effect on them, their contact with the sharp, spiny mesquite bushes cause them to literally tear apart. At this point, Baz took pictures of the two large portions, each of which measured approximately two feet at the largest dimension. One landed in water, the other at the base of mesquite bush. The one in the water showed no visible signs of deterioration in the short period that it was observed.

After taking the pictures Baz made inquiries, found that the first one had

(See Foam—Page 2)

Foam . . .

(Continued from Page 1)

been destroyed by frightened children and adults who beat it with sticks and stomped on it with their feet. Then he went back to his station at the Main Gate of the customs station. At noon a hard, driving rain began. Several hours later when the location of the balls was examined again there was no evidence whatsoever of their existence.

Investigation by this office showed Baz to be a serious, intelligent family man who has been with the Mexican Customs service for 32 years. He is well-respected by fellow employees and business men in Agua Prieta and is considered to be honest and reliable.

Baz and Gordillo's description of the strange substance was the following: It closely resembled tiny interlocking bubbles of some sort which were interwoven with a fibrous stuff. Baz at first thought it was a concentration of soap or detergent suds which had blown in from some laundry in the area. However, the balls remained intact in the hard driving wind and only broke up when they came in contact with the brush in the area. It also had strange clinging quality as was evidenced by the way it settled around the mesquite bush. Although it tore in contact with the mesquite, it did not disintegrate further despite the heavy winds which tore at it. Had it been any kind of soap or detergent foam it should have broken up and dispersed even while in the air above the trees.

Baz took two pictures with his Lord 5-D camera, using an F/16 aperture, ASA 125, 35 millimeter film and 1/100 second exposure. He hesitated to touch it, but did take a stick and pushed it into a portion of the substance and noted that it adhered to the stick like "cotton candy." When the stick was thrust into it, it did not cling as suds would do, but it clung to the stick.

In an attempt to understand why other reports were not forthcoming a study was made of the surrounding area. Agua Prieta is located slightly southwest of Douglas, Arizona. To the west of the two towns is open range with nothing between them and the Phelps-Dodge smelter several miles away. With the strong, cold north wind blowing few people were outdoors, and those who were were not likely to be looking up. Being above rooftop level when they came in, the balls of foam would not have been seen by people inside of buildings.

This sighting was brought to our attention by the editor of FATE magazine who asked the Lorenzens to investigate and submit an article if it merited same. As a result, in an effort to get in-

formation to FATE magazine at the earliest possible date, there was no time for a search of the files to determine whether or not there was a precedent. However, since then a local member recalls having read about a similar incident in Illinois in 1957 during that fall flap shortly after the launching of Russia's first satellites. The clipping is believed to be a picture with caption and shows a policeman standing beside a tree in which some of the foam was located after it fell to earth.

To conclude, this substance seems to be similar to "angel's hair" but is even more puzzling as there is no indication of its purpose or origin. After the rain of the afternoon of 12 December, there was no trace of the stuff and it is presumed that the pelting of the rain broke it up into fine particles and that it was absorbed into the ground. If any member has any further information concerning this general type of aerial phenomena we would appreciate it for our files.

NO CASE (INFORMATION ONLY)

Source: Flying Saucer Magazine Aug 64

King City, California

13-14 Dec, 1963

• Air Force Intelligence Officers were checking reports of Unidentified Flying Objects over Northern California, unable to explain why hundreds of people on the ground could see them while radar couldn't. There was widespread interest in the sighting because it occurred coincidentally with the arrival of Mariner II on its flight

path past the planet Venus. A spokesman at Hamilton Air Force Base said that a report from the Sheriff's office at Salinas was received at 4:34 alerting the Air Force to the fact that a large unidentified flying object was "going back and forth and changing colors" high in the sky over King City. The air spokesman said that the USAF immediately alerted the state civil defence at Sacramento. Defence in turn called the 28th Combat Center. At the same time the Federal Aviation Agency Tower at Oakland directed all civilian aircraft in Northern California to be alert for UFO or unidentified craft. Pilots flying in the predawn darkness flashed that they could see lights but were unable to make positive contact. Radar was also unable to see the mysterious lights. A half hour later a second report came in that the UFO was back and now orbiting the Greenfield-Solidad-King City area. As radar probed it and Super Sonic Jet interception was being considered, the UFO suddenly climbed straight up and disappeared to the South, a Hamilton spokesman said. Twenty minutes later a third report was made at 5:20. It also came from the Sheriff's Office saying that the UFO had returned for the third time. This morning's predicament was the largest UFO sighting in recent years. This story appeared

in the "CITIZEN NEWS, DECEMBER 14, 1963, HOLLYWOOD, CALIFORNIA". Verstein UFO Study Hall, Erwin Vertlieb, Director, 1517 Benner St., Philadelphia Pa., 19149.

17 Dec 63
Argentina

Sauce Viejo

The newspaper *La Gaceta* for December 17 reports that a railway worker named Cesar Tulio Gallardo claims to have had an extraordinary experience with an extraterrestrial being. According to his account to the Police authorities, he was sitting in a stationary sleeping-coach on a siding at Sauce Viejo province of Santa Fé, reading the paper and listening to the wireless, when his carbide lamp went out and his wireless went dead. He went to look outside, but seeing strange lights out there, he at once shut the door and remained inside. At that moment somebody else, "a being totally surrounded by lights," came in at the other door of the coach, and the dazzle from him was so terrible that Gallardo was obliged to cover his face with the newspaper. But the visitor snatched the paper away from him and tore it up. Gallardo was able to observe at this point that the visitor's legs were clad in some kind of shiny dark cloth. The mysterious being next seized an oil-can and poured its contents into a sort of small bottle which he produced from inside his clothing. He then vanished through the same door by which he had entered. A few minutes after Gallardo had reported his story to the police, passengers on an incoming train declared that they had just seen "a luminous man" walking along the railway track.

Ruby "Rings" Over NZ

V. E. Burnett of Ngongotaha, N.Z., reported in a letter to the Editor, Auckland Press, that on 10:15 p.m. on December 28, 1963, he saw traveling slowly in an east-west direction, low enough to be visible through trees, a moon-sized, glowing, pulsating, ruby red circle of light composed of equal-sized segments, the space between which were easily discernible. The object moved in "leisurely" fashion across the sky, pulsating evenly at regular intervals. While watching, Burnett was amazed to see it turn back on its path about one third of the way, make a slight detour to the left and head south over the town of Ngongotaha. Trees and a hill prevented him from seeing what actually became of it. The whole sighting lasted "at least a good five minutes."

FLYING SAUCER REVIEW

26 DEC 63
Argentina

Mar del Plata

According to the daily paper *La Prensa* (Buenos Aires) for December 26 and 27, 1963, large numbers of people had reported that as they were coming out of the casino at Mar del Plata late at night, they had seen large numbers of intensely luminous objects over the sea.
