10. BRIEF SUMMARY OF SIGHTING Light which looked like star changing colors from red to white and back to red. Motion to West at 84 deg elevation. Disappeared in flash. Initial observation in SE. On the case of 27 February, could I have the name of the observers? I think the star evaluation for this is doubtful, since in 45 minutes a star can't change its elevation by 60°. <u>OK OBJECT DID NOT MOVE 60°</u>				11. COMMENTS Several stars of first mag in SE but nothing at 84 deg elevation. Picture indicates that object observed at 15 deg elevation rising to 75 deg elevation. No definite positional data presented. Sighting remains characteristic of Astro body and case carried in this category. <u>SIRIUS</u>

Dear Sir,

on This day, AT 7.25 PM
I noticed a light which at first
look like a star. But it flashed
from red to white, and back.

I was at a position of about
84°

It moved west for about 5 minutes
and then slowly headed north for about
30 seconds. Then it started west again.
Then it disappeared in a flash.

It couldn't have been a balloon
for the wind was from the west.

It couldn't have been a satellite,
because they don't move into
the west.

Can you tell me what it was?

Sincerely
