Route 2 ~~XXXXXXXXXX~~
Brenham Texas
Sept. 5, 1964

Dear Sirs:

I am a senior at Brenham High School and a student of Trig. and Physics. I have studied various cases of U.F.O.s and I realize that nearly all can be reasonably explained.

About 11:25 tonight while sitting in my car with my girl friend in front of her house about $\frac{1}{2}$ mile southwest of Brenham this event occurred.

As we talked suddenly the entire area as far as I could see was as bright as day with a light which appeared to me to be green. It faded away swiftly, growing dimmer and dimmer. I stepped from my car but could see no reasonable explanation for the

light.

If you have an explanation please let me know.

Now sir if you will excuse me may I offer an theory.

"Graeber Theory"

I feel such lights could be caused by the explosion of stars 100s of light years away. The light must travel through space and since there are few particles or little atmosphere and gas it is not seen until it hits the earths atmosphere. My theory includes that light unlike sound, can go through anything. (The laser ray) I think light is not visible and that you can see only the reflection there of.

This is just one of many of my odd ideas if you have proof I may be wrong please let me know. Please send me any information that will help.

Sincerely,

~~XXXXXXXXXXXXXXXXXXXX~~
