Dear Sir

Just within the last few weeks some friends and I have been studying the stars. During this time we have spotted very unusual aircraft that appear to be round diskular shape and appear to travel much faster than jets, commercial aircraft, and act much different than satellites. The ~~satellites~~ satellites we have observed seem to go clear across the valley and and disappear out of sight. at the other end where these unusual ~~beings~~ ~~beings~~ seem or appear to only $\frac{1}{3}$ or $\frac{1}{4}$ the way across the ~~valley~~ ~~sky~~ ^{stop} and go straight up only to go so high that they disappear in space. We are wondering if you would please send us some information as to what these ~~unusual~~

unusual round diskular aircraft
could be. One of my friends has
spotted one that looked just like a
bright light going across ^{about} $\frac{1}{4}$ the sky
and then it turned and went straight
up through space and disappeared
it took 1 to 2 minutes going ~~up~~ across
the sky and then shot straight
up into space and disappeared in
1 to 3 seconds completely out of
sight.

yours sincerely
