35. Information which you feel pertinent and which is not adequately covered in the specific points of the questionnaire or a narrative explanation of your sighting.

I have seen single meteors before, and this moved at about that speed.

However, it 1) Was far larger than the relatively streaking pinpoint of light these are, and 2) Was brightly glowing a predominantly green [not white or red]

Seemed to come from WSW quadrant and moving generally Eastward, approximately parallel to earth or perhaps heading down slightly allowing for optical/vision distortion.

I was facing right at it, ^(facing it) saw it coming from W, above angle of housetops & trees, and we could not follow it Eward, to left, because of other trees.

Goddard S.F.C. informed me that could not have been a satellite in orbit because: They move much slower (visually); do not glow brightly; and only one scheduled to be seen over Wash. D.C. that night, Echo II, was 1° above horizon
