27. In the following sketch, imagine that you are at the point shown. Place an "A" on the curved line to show how high the object was above the horizon (skyline) when you *first* saw it. Place a "B" on the same curved line to show how high the object was above the horizon (skyline) when you *last* saw it. Place an "A" on the compass when you *first* saw it. Place a "B" on the compass where you *last* saw the object.

28. Draw a picture that will show the motion that the object or objects made. Place an "A" at the beginning of the path, a "B" at the end of the path, and show any changes in direction during the course.

29. IF there was MORE THAN ONE object, then how many were there? _____
Draw a picture of how they were arranged, and put an arrow to show the direction that they were traveling.

30. Have you ever seen this, or a similar object before. If so give date or dates and location.

All except one report give object as round. One report had tail larger and longer than object. No sound in any reports. All reports had object between 40-70 deg elevation. Two reports object disappeared straight up. Reports averaged 15 minutes. Most of objects were stationary. Newscast stated that ice clouds were reflecting city lights etc. Source of this information is unknown. Data incomplete on each report since all info submitted as one basic report instead of individual sightings. Evaluation from newscast a likely possibility.

Sighting of 4 September 1965, Pittsburgh, Pennsylvania:

I talked with Mr. [REDACTED] and Mr. [REDACTED] two of the nine independent witnesses. Both witnesses gave consistent stories, but the evidence of neither of them rule out the strong possibility that the cause of the sighting was reflection of blast furnases on high thin clouds containing ice crystals. In fact, local interest of news reports reportedly stated that such an ice crystal cloud reflecting city lights had been detected.
