3. SOURCE Civilian	10. CONCLUSION Astro(S/P) PHOTOS: Possible lighthouse
4. NUMBER OF OBJECTS Four	
5. LENGTH OF OBSERVATION 3½ hours	11. BRIEF SUMMARY AND ANALYSIS The colors of the objects were white, tinged with red and green. All were bright lights no definite object was seen. All movements were erratic but generally remained in the same position. All of the lights were at an elevation of between 25 and 30 degrees. First three objects probably were the stars Sirius(250 deg Az 10 deg el.); Jupiter (290 deg Az 14 deg el) and Capella (310 deg Az 20 deg el). The fourth object was most likely Arcturus which was at 110 deg Az 55 deg el. Photo analysis could not definitely identify the image, but believed that it could be that of a lighthouse.

1. PURPOSE: This is in response to Work Order Number 66-35 submitted by Major Quintanilla, TDEW/UFO. Message concerning conditions and sighting was examined and subject photography was analyzed in an attempt to identify the objects reported.

2. ANALYSIS: Although the exact nature of the imagery could not be determined, it is believed that it could be that of a lighthouse. The photography was accomplished in the dark hours between 0630 Z and 1000 Z time. The main group of lights suggest a "tower-like" configuration which could be a lighthouse at Pt. Cabrillo. The light which is adjacent to the "tower" could be one which was being emanated from an attached building at it's base.

UFO Observation, 23 March 1966

78th Combat Support Group

1. Reference the unidentified observation of Engineman Fullenwider of the U.S. Coast Guard on 23 March 1966. His slides and prints are contained in attachment one. Request that you forward these to him.
2. Although the exact nature of the imagery could not be determined, it is believed that it could be that of a lighthouse. The photography was accomplished in the dark hours between 0630Z and 1000Z time. The main group of lights suggest a "tower-like" configuration which could be a lighthouse at Pt. Cabrillo. The light which is adjacent to the "tower" could be one which was being emanated from an attached building at its base.
3. The description, colors, movements, duration, etc., are consistent with that of an astronomical observation. A study of the information submitted leads to the conclusion that astronomical bodies were responsible for the sighting.
