3. SOURCE Military	10. CONCLUSION 1. Possible (SATELLITE) <i>Very prob. J24</i> 2. PHOTO: (PROBABLE ABILICATION)
4. NUMBER OF OBJECTS One	
5. LENGTH OF OBSERVATION Minutes (Varied)	11. BRIEF SUMMARY AND ANALYSIS Observers watched a star like object travel across the sky. Object appeared like a light reflecting off a highly polished metal. Object seemed to stagger in flight and it stopped next to other similar object that did not move, one of which seemed to have the same bluish hue. Object was compared to the planet Venus and to a big big balloon. Description is consistent with that of a satellite. The image is of insufficient size and definition of accurate analysis as to what the object may be. Lack of background density and the absence of definite outline, coupled with the presence of pressure marks superimposed on the image indicated this is possibly a photograph of a reflection rather than an actual image.

27. In the following sketch, imagine that you are at the point shown. Place an "A" on the curved line to show how high the object was above the horizon (skyline) when you *first* saw it. Place a "B" on the same curved line to show how high the object was above the horizon (skyline) when you *last* saw it. Place an "A" on the compass when you *first* saw it. Place a "B" on the compass where you *last* saw the object.

28. Draw a picture that will show the motion that the object or objects made. Place an "A" at the beginning of the path, a "B" at the end of the path, and show any changes in direction during the course.

Request negative be forwarded to A/3C H. Y. Yonemura, Jr, Forbes AFB, Kansas along with enclosed enlargement and the following Project Blue Book evaluation:

a. The image which appears on the negative and the photograph is of insufficient size and definition for accurate analysis as to what the apparent object may be. Any definite statement is precluded by the absence of exposure and processing information. However, the noticeable lack of background density and the absence of format outline, coupled with the presence of pressure marks superimposed on the image indicates this is possibly a processing aberration rather than an actual image.

1. PURPOSE: This report is written in response to Work Order Number 66-34 requesting photo analysis be performed as to what the unidentified object may be.
2. ANALYSIS: Analysis was conducted jointly by the Photo Analysis Division, TDDPA and the Photo Processing Division, TDDPP.
3. The image which appears on the negative and the photograph is of insufficient size and definition for accurate analysis as to what the apparent object may be. Any definite statement is precluded by the absence of exposure and processing information. However, the noticeable lack of background density and the absence of format outline, coupled with the presence of pressure marks superimposed on the image indicates this is possibly a processing aberration rather than an actual image.
