I would like to request
some information on some strange
objects we saw in the sky last
month on April 23rd about
9:00 p.m.

I can explain them only as
large misty formations outlined by
a V-formation of white faintly
glowing masses. They seemed to be
about 2 miles up and much
larger than planes. There was no
noise involved and they were
traveling at a very fast speed.
I would say we saw about twenty
of them and they were traveling
(Send 164)

from south to north, except we
did see one going from west to
east.

I have read that there are
such things as "moon birds" but
it didn't give a description of
the phenomena. Since what we saw
were misty, V-shapes I thought
maybe this could be an explanation.

We would very much like
to hear from you as to what they
could possibly be.

Thank you
