P NRS Attached

1. Photography of a reported "unidentified flying object" was analyzed and found to consist of a tiny reddish image of unknown origin. The photography (two 35 mm color slides) was measured and the curved, "boomerang" shaped images were found to be 0.409 mm and 0.222 mm high from end to end with a length from the ends to the curved portion of 0.260 mm and 0.178 mm respectively.
2. A possible explanation is that subject image was stationary with camera movement causing the curved shape of the resultant imagery; the image being that of an electric light used in a fruitless attempt at some night photography of insufficiently illuminated subjects.
