Dear Sir,

every night almost there is
a star that moves out over
the dipper, we saw it know
fore almost a month

And another object took a
strange path, (see drawing)

Jan 14 And I myself would
like to watch and observe these
objects. If one is in your
area why don't you try a
sonic boom on one it might
explode, or it might be
attracted by the noise

Dear Sirs,

We are writing to inform you of 4 sightings of something that moved in the constellation Virgo.

We have 6 members and 2 posts. We have 3 pairs of 7x35 power binoculars, 3 cameras, 1-75 power telescope, & 1-35 power telescope.

The object was sighted at both posts, by 3 of our members at 10:15 p.m. each night.

The thing was about 70° in the southern sky in Virgo. It had a red orange flash with about 5 second between flashes moving at about 300 mph, in a north-west direction. There was no sound although our dogs started howling when it started moving and they stopped when it got out of sight.

We have seen this object 4 nights in a row.

Please reply.
