on the 22nd we saw 1 & watched from 12:15 AM until after 2:30 A.M. It was still there when I went to bed. (astro)

23 + 24 + 25 too cloudy

26th after 12:00 AM & went to bed at 2:00 & it was still there. (astro)

26th 10:30 P.M. Manslick Road. There were 2 + the one on the left moved farther left & down toward horizon & out of view. A/C (astro)

27th 12:30 AM. Saw 1 at 2508 feet & we until I went to bed at 3:00 AM. Still there.

28th. Had a telescope & saw very definite ~~solid object~~ after 12:00 A.M. Approximately 1 1/2 or 2 hrs. later another appeared. Then ~~white~~ right before I called Patterson & more appeared. Then about 3:30 AM a few more red & green lights appeared but were indistinct & further away & I couldn't get the telescope focused on them clearly but could see red & green flashed thru it. These were all moving slowly, but not as fast ~~as~~ as stars or planes. (See other side)

The first one we saw came in like a plane + stopped + started flashing.

They didn't move as fast as planes. The constellations would move as time passed, but these stayed in the same area of sky but were moving also because we had to keep shifting the telescope to keep them in focus.

To whom it may concern:

If at all possible I would appreciate someone informing me of any action that is taking concerning these sightings, or letting me know if there is an explanation for these things.
