35. Information which you feel pertinent and which is not adequately covered in the specific points of the questionnaire or a narrative explanation of your sighting.

When it was first sighted it was in the N.E. and stationary. It was stationary about 10 minutes, then suddenly ~~took off~~ very fast and moved to the WNW. When in the North it suddenly looked white on the right side, then seemed to go back to the original orange again as it moved on.

By this time we were home and ran to get the field glasses and looked at it through them. That's when you could see it was not round as it appeared with the naked eye, but was flatter on the bottom. It was getting farther away and smaller as we watched it.

My parents did not see it till Miss Johnson and I reached home and drew their attention to it.

Did they ever see it move while they were standing still?
