1. DATE TIME GROUP 22 Jan 67 1555-1600Z	2. LOCATION Mid-Eastern Pacific Area multiple
3. SOURCE Military	10. CONCLUSION <i>Photo</i> 1. Other (Missile Activity) ✓ <i>not</i> 2. AIRCRAFT (POSSIBLE)
4. NUMBER OF OBJECTS	
5. LENGTH OF OBSERVATION 1-5 minutes	11. BRIEF SUMMARY AND ANALYSIS Observers reported a circular shaped disc which was bright and brighter than the sun. The object was directly overhead when it appeared to be a or two. The airborne observers reported a bright disc, to several times larger than the sun, and it was seen on Johnston Island. It was seen by a group of observers with a high speed camera. The object was seen for a short time and then disappeared.

SUBJECT: UFO Report (Msg 90SD-10615 Feb 67)

1 0 1 1 1 37

TO: FTD (TDETR)

1. In accordance with AFR 80-17, 19 Sep 66, and supplemental to the above referenced message, the following is transmitted herein:

- a. original negative
- b. 2 copies prints
- c. statements of the observers
- d. 2SS Form 5, Baker-Nunn Passage Record

2. Pictures were taken with a USAF SPACETRACK Baker-Nunn camera at Sand Island (Johnston Island) at 22/1600Z. (NOTE: Static marks are evident over entire film. Static was caused by personnel error; film remained in camera ten (10) minutes after exposure of subject frame. Azimuth from site was approximately 25-28° True and Elevation 30° above horizon.) Enclosed statements were made by Air Force and Coast Guard personnel stationed at Sand Island.

3. 9ADD Project Officer is Capt Del Tonguette, Space Systems Operations Officer, Ent AFB, extension 2677.

FOR THE COMMANDER

A handwritten signature in cursive script, likely of Charles E. Minahan, is written over the typed name.

REMARKS	REMARKS
BD max 31 orient 17h 49° for 197	40 - Measured from center of elongated image 40 - 4 1/2" in Dia across 16mm in R.A. 300g

At 1000Z on 22nd of January, 1967, I, [redacted], observed the appearance of an object with extraordinary brilliancy. The object was in the same position as the object we were so much. It was in orientation frame and the object started to move toward us and it was very low. The object came out of the north and was no longer seen. The light or ring or particles surrounding the object was always, from the time we saw it until it was gone, round. But, it also continued to grow in size. The object appeared to be a dense point in the center. Also, it seemed to be gaining speed. Then it changed direction and headed west. When it changed direction, the light had grown to where it covered about 60° in diameter. Then the glow at the farthest point west, started to disappear just as if it were passing behind a cloud or some object, and then the object was gone and the glow to the east was all that remained. Then it also disappeared. The only thing was, there weren't any clouds in that part of the sky. Just before it had disappeared there was a long flame emitted from the center point in an easterly direction.

All the time it just looked like a big cloud floating along except it was quite bright. This is the extent of what I saw.

JOHN H. [redacted], A3c, USAF

At approximately 1600Z, 22 January 1967, I was informed by the crew that a strange object was sighted.

When I arrived in the observation room there was a bright object of approximately the 1st or 2nd mag. surrounded by a circular halo. This halo of light was of equal intensity from the center to the outer edge. At this time it was about 4° in diameter and appeared to be moving slowly from a north easterly direction toward the center. The exposure was taken and the crew attempted to orientate the camera to pick up the object.

The halo of light started to expand and become less dense. When it appeared to be 70° to 80° above the horizon, the angular velocity increased and expansion of the surrounding light appeared to be 45° to 50° in diameter, but density and brightness of the surrounding light had decreased. At this time the object appeared to move in a northwest direction. The surrounding light remained a circle even after it had expanded to the maximum size. There was no trail left and the object remained in the center until it disappeared. The object disappeared at approximately 54° above the horizon. The western side of the surrounding light disappeared as if it had gone behind a cloud. There were no clouds visible in the immediate area at this time. The remainder dissipated slowly.

During observation there was a problem in focusing my eyes on the surrounding light. It appeared as if it was a large circle of gas or thin clouds. I also observed all surrounding stars for possible halos caused by vapor in the atmosphere. The stars were clear. Surrounding light was white.

Observation was for approximately five (5) minutes.

JAMES C. LITTLETON, TSgt
Crew Chief

photograph and one (1) 13" x 2 1/8"
strip of negative.

[REDACTED]

22 January 1967

I, DC3 Howard E. SWEETSER 358 950 USCG, was on Engineer-Security Watch at the USCG Loran Station Johnston Island, located on Sand Island in Johnston Atoll from the hours of 0000W - 0800W. At approximately 0500W, 22 January 1967 I sighted an object in the Northeast portion of the sky. Its path of travel was to the West where it hovered over East Island at a low altitude and emitted a bright light from the vapor ring around it. The object was disk like in shape with a small dome on its top. The vapor ring about it was produced by gas given off from it. The object itself was a bright silver, which illuminated the vapor to a light gray. The object gained altitude and the vapor ring was not seen then, and at this time the object moved towards the west and disappeared out of sight around 0530W. Its movement was fast, but you could still distinguish it from a star. The sky was cloudless, but after the object had passed and was out of sight, and after working for approximately 10 minutes, I looked up and the stars were now obscured.
