Dear Sirs

On Feb 14 1967 ~~Irvington NJ~~ and
I spotted a orange color star, soon
it discharged a smaller orange objects
North, it was sparkling and leaving
no smoke trail of any sort about
it.

One idea was a meteorite but
it would have left a trail, when
it disintegrated. Another was the
idea of a Nova or Super Nova
but it would be too young to
break up if it is a orange star
so that led us to the idea
of contacting you, for if it
is a V.F.O. We want you to
know about it

I am a 9th grader at Myrtle Ave
J.H.S. we seen many meteorites before
so that led out another factor.

Please Reply if you know.
Thank You

At about 7:00 PM that evening [redacted] and I went out with my 60x Telescope we were looking at the moon when I sighted a strange orange star I thought nothing of this strange object, then Ray and I set on a stone stairs connecting the dance hall to the lot then I yelled [redacted] look the star broke up. I ran for a better view as it moved across the sky Ray panicked slightly, I was nervous for a while soon it disappeared.
