A 16—The Sioux City Journal, Wed., May 10, 1967

Air Force Stumped by 'UFO' Photo Taken by Sioux Cityans

A 16-year-old Sioux City boy drew this picture from memory of one of the three "flying saucers" he and an 18-year-old friend saw and photographed. He said the objects were about 20 to 22 feet in diameter; six to eight feet deep, and had domes on the top.

He also said there were peculiar grooves across the flat bottoms. They were described as being made of dull metal, not unlike zinc. They flew 50 feet overhead. U.S. Airforce still has the Polaroid-type picture.

By GENE ANDERSON
Journal Staff Writer

It was a clear, crisp cool day in Sioux City.

Patches of snow could still be seen on the surrounding hills.

From their vantage point high on a hill, the two teen-age boys could see for miles in every direction.

It was about 5:30 in the afternoon, about an hour before sunset. The boys had returned to the hill to retrieve a pair of gloves they had left earlier in the day.

What they were about to see scared them badly. The 18-year-old boy still refuses to discuss it with anyone . . . even his parents.

The 16-year-old youth confided in his parents and a priest,

seconds. This time, we took a picture of it."

Were they flying saucers?

"Not really," said the boy. "They looked more like inverted coffee cups than saucers," he added.

What did they look like?

Answered the youth, "They were about 20 to 22 feet in diameter. From top to bottom, they must have been 6 to 8 feet deep. There was kind of a dome on top."

What color were they?

"Dull metal," said the youth. "Not shiny like aluminum; more like the zinc in garbage cans," he added.

Did he notice anything else about them?

"The bottom, which was flat, had grooves running the width of it at intervals of about every

the use of a scale factor to verify the actual size of the object.

"The image is such that no specific details are visible other than a circular object with some type of protrusion.

"As such, no positive explanation can be made of the object. However, there is no evidence in the photograph to indicate that the object might be extraterrestrial."

The letter, signed by Lt. Col. Earle P. Nase, deputy chief of the Operations Branch, Public Information Division, Department of the Air Force, might have said, but didn't, that there was no proof that it was not extraterrestrial, either.

On Friday, The Journal talked with Maj. D. G. Rhoads in the same Penta-

A Sioux City priest, who asked to remain unidentified, points to the direction (south-west) from which three unidentified flying objects came as they flew directly over the heads of two teen-agers here earlier in the

spring, according to the youths. About 20 yards to the left of the priest and not shown is the new Congregational Church. Below is Iowa Highway 7 and the Buckwalter addition.

"Each case is objectively and scientifically analyzed, and, if necessary, all of the scientific facilities available to the Air Force can be used to assist in arriving at an identification or explanation.

"The third phase of the pro-

scription of the youth: "He is a high school junior, and a good student. He comes from a well-to-do family. He is dead-serious that he has seen something he knows was real, but wishes was not."

We questioned the boy over

"It appears that this tale place by direct stimulation the nervous system, perhaps the brain, thus bypassing ear and much of the associated hearing problem."

Similarly, the boy told The Journal that he was "pale."

and then with an official Air Force investigator. Finally, at the request of the priest, the youth told what he saw that spring day to a Journal reporter.

"The first one passed over our heads at great speed. We didn't see it until it was almost out of sight."

"We saw the second one coming. I stood looking at it, while the other boy ran to the car to get a camera. It was gone before he got back."

Third One Comes

"We were looking in the direction that the second one had gone, when we sensed . . . I can't explain it any different—we just knew that another one was coming from behind us . . . the third one."

"It went directly over our heads. We had it in our vision for 10, maybe 15

or it at intervals of about every two feet," answered the youth. "They ran opposite to the direction of flight," he added.

Were there any windows or openings in the objects? Any motor noise? Any lights? The boy answered negatively to all three questions, but said that there was a "swishing noise."

All three objects (Unidentified Flying Objects, if you will) traveled an almost identical flight path from southwest to northeast. They passed over the boys' heads at a height of about 50 feet.

Fortunately, the boys took their one photograph with a Polaroid model camera. They are almost impossible to fake.

Word from Pentagon

The Journal Tuesday received an evaluation of that picture from the Pentagon:

"Lack of either foreground or background detail precluded

Rhoads in the same Pentagon office.

"In essence, they don't know what the heck it is," said Maj. Rhoads.

"They" is the foreign technology laboratory at Wright-Patterson Air Base, Ohio, the site of Project Blue Book.

Some serious reading about "flying saucers" leads one to believe that the Air Force is in the business of disproving that they exist, and not proving what they are.

For the Air Force to say that the picture shows "a circular object with some type of protrusion" is really quite an admission, since they normally attribute such sightings to "swamp gas, balloons, the planet Venus and meteorological phenomena."

Project Blue Book

Project Blue Book is the name given to the official investigation of such sightings.

Says the official manual of that organization:

"The United States Air Force has the responsibility . . . for the investigation of unidentified flying objects (UFOs)."

"Air Force interest in UFOs is related directly to the . . . responsibility for the air defense of the United States."

"The program is conducted in three phases. The first phase includes receipt of UFO reports and initial investigation of the reports. The Air Force base nearest the location of a reported sighting is charged with the responsibility of investigating the sighting and forwarding the information to the Project Blue Book Office."

"If the initial investigation does not reveal a positive identification or explanation, a second phase of more intensive analysis is conducted by the Project Blue Book Office."

"The third phase of the program is dissemination of information concerning UFO sightings, evaluations and statistics. This is accomplished by the Secretary of the Air Force, Office of Information."

To achieve the heady status of being an officially Air Force-declared UFO, a "sighting is considered unidentified when a report apparently contains all pertinent data necessary to suggest a valid hypothesis concerning the cause or explanation of the report but the description of the object or its motion cannot be correlated with any known object or phenomena."

There have been nearly 700 of these official UFOs recorded by Project Blue Book since 1947, and other sources place the number of such sightings much higher.

Youth Interviewed

The official UFO investigator at the Sioux City Air Base, Capt. Bill Herbert, interviewed the 16-year-old Sioux City youth shortly after the sighting on March 4.

He was asked about the credibility of the boy.

He answered, "In my opinion, it is no hoax."

Unable to explain the verbal and photographic evidence locally, he forwarded the report and picture to the Project Blue Book Office. This office had the picture more than six weeks before issuing its evaluation, and it still has it.

The picture will be returned at a later date, according to the Air Force spokesman.

Fear Crank Calls

No one connected with the incident will allow his name to be used. All expressed concern about crank calls.

The priest offered this de-

We questioned the boy over the telephone further. Did they scare you?

"They did," came the terse reply.

What did you think about "flying saucer" stories before the incident?

"I really hadn't given the matter serious thought, but I was generally skeptical," he answered.

Do you believe in them now? "If you see something like I did, you'll be a believer, I'm sure," came the response.

The priest talked further with the boy and his parents, and said: "Those who viewed the picture are all in agreement—it is a picture of an oval object with a very obvious dome. With the use of a magnifying glass they say they could see the groove outlines along the edge of the object."

Not only does the boy's description of the craft coincide with the sightings of many, but there are two other aspects to the Sioux City case that jibe with other reports:

'Senses' Presence

The boy said they "sensed" the presence of the third craft. The Journal's nationally-syndicated columnist, Frank Edwards, in a recent book called "Flying Saucers—Serious Business" reported:

"Many persons have reported 'sensing' the presence or approach of UFOs—a sort of detection-by-hunch, you might say, but the recent research by Prof. Clyde E. Ingalls of Cornell University shows that there is scientific support for such 'hunches.'"

"Of the ability to 'hear' electromagnetic waves, Prof. Ingalls says:

Journalist that he was "positive" that he left the car running when they got out the car, and just before the sighting of the three UFOs.

When they got back in the car, the motor was off.

In one of many similar incidents reported in his book, Edwards reported:

"An immense object, glowing blue-green, swept down on the trees and settled on the highway. The lights dimmed, the engine died . . ."

Edwards concluded his fascinating book:

"Where these things or where they come from, why they come at all are questions which I doubt that anyone can answer. It is my personal belief that the day is not distant when these questions will be answered for us."

"I see no reason to fear the revelation, whatever it may be. I feel, as Gen. Douglas MacArthur expressed it, that contact with intelligent beings from elsewhere in the universe will be the greatest experience of the human race."

FILE WITH
SIOUX CITY, IOWA
CASE

OFFICE OF THE SECRETARY

May 3, 1967

Dear Mr. [REDACTED]

We have received some word from our photographic interpreters concerning the unidentified flying object photograph submitted by the Sioux City youths and which you have discussed with Major Rhoads of my staff.

A letter from the Project Blue Book office will be going to Sioux City within the next few days, and we know you will want to check your sources to be sure the letter is received before you publish anything. I know you would not want the boys to read about it in the JOURNAL before they receive their letter.

The photographic analyses revealed that if the witnesses' estimates of the size of the object are correct, the object would be located about 430 feet from the camera. The camera focal length versus the size of the image as it appeared in the photograph were used in determining this. Lack of either foreground or background detail precluded the use of a scale factor to verify the actual size of the object. The image is such that no specific details are visible other than a circular object with some type of protrusion. As such, no positive explanation can be made of the object. However, there is no evidence in the photograph to indicate that the object might be extraterrestrial.

If you wish any additional information, feel free to call.

Sincerely,

EARLE P. NASE
Lt Colonel, USAF
Deputy Chief, Operations Branch
Public Information Division
Office of Information

Request for UFO Information

Mr. [REDACTED] and
[REDACTED]

Sioux City, Iowa 51104

Dear [REDACTED]

Reference your recent observation and photograph of an unidentified flying object.

Photographic analysis revealed that the image is such that no specific details are visible other than a circular object with some type of protrusion. As such, no positive identity can be made of the object.

Analysis revealed that if the object had a diameter of 12 feet, it would be located 430 feet from the camera, but if the object was located 600 feet from the camera, it would have a diameter of 17 feet.

Lack of foreground and/or background detail precluded a scale factor to measure the size of the object.

The original photograph will be forwarded as soon as a copy has been made. The copy is being made for the case history only. Under no circumstances will the photograph be released to the news media. Thank you for submitting the photograph for analysis.

Sincerely,

(4)
HECTOR QUINTANILLA, Jr, Major, USAF
Chief, Project Blue Book

SUBJECT UNIDENTIFIED FLYING OBJECT

LOCATION SIOUX CITY, IOWA

DATE 25 February 1967

PHOTOGRAPHY

AF _____ IR _____ QUALITY _____

P NRS 1 Polaroid print (B&W)

1. PURPOSE: This report is in response to Work Order Number 67-36 submitted by Major Quintanilla, TDETR, to determine the identity of the object photographed.

2. ANALYSIS: The photography appears genuine insofar as content is concerned. Examination of the submitted Polaroid-type print has negated double exposure and/or retouching. The object appears to be circular in planform with a flat-topped "superstructure". Source indicated the object had a diameter of approximately 12 feet and was located approximately 600 feet from the camera when photographed. The camera focal length versus the size of the image as it appears in the photography was computed. The results indicate that if the object had a diameter of 12 feet, it would be located 430 feet from the camera; but if the object were located 600 feet from the camera, it would have a diameter of 17 feet. Lack of foreground and/or background detail precluded a scale factor to size the object. No satisfactory explanation could be made of the object.
