

(PROJECT 10073 RECORD)

1. DATE - TIME GROUP 25 Feb. 1967	2. LOCATION Fargo, No. Dakota
3. SOURCE Civilian	10. CONCLUSION Unidentified
4. NUMBER OF OBJECTS One (1)	
5. LENGTH OF OBSERVATION 2 - 4 minutes	11. BRIEF SUMMARY AND ANALYSIS 2 boys, 16 & 18 years of age who, according to investigating officer and Hynek (who personally investigated the case) appear to have good reliability saw a luminescence "blob" arise from the ground and ascend with acceleration in a northeasterly direction. The night was dark and partly cloudy. Photographs are consistent with verbal account by boys and indicate diameter of roughly spherical glow to be 5 feet or somewhat larger. Two polaroid photographs were taken. In outward appearance the glow resembled a hypothetical plasma ball and this could be the explanation if it can be shown that such plasma balls are physically possible.
6. TYPE OF OBSERVATION visual	
7. COURSE Azimuth 30° Alt. 15°, end: Azimuth 40° Alt. 40°	
8. PHOTOS ☐ Yes ☒ No	
9. PHYSICAL EVIDENCE ☐ Yes ☒ No
