Report on the June 2, 1967, McE~~st~~port, Pennsylvania case. I believe that this can be classified as "probable meteor". The shortness of duration (3 to 6 seconds depending on observer), the fact that it left trails all fits in with the meteor picture. Two witnesses disagree as to the matter of motion and I think we can discount the 90° turn reported by one since no mention whatever is made of it by the second observer. The second observer, in fact, states that there was no motion or change of course. I do not think he means in this case that there was no motion, but rather that there was no change from straight line motion. That is, no zigzagging or abrupt turns or speeding up or slowing down. In short, I could easily defend the evaluation of this case as a bright

meteor before any panel of experts.

On the night of June 2, 1967 Bill and I were standing in front of my house talking. Suddenly Bill shouted "What's that" and pointed in the south east. I looked in the same direction he pointed, and here's what I saw: a disk shape, fireball looking object. It was moving about 60 mph and from the ground it appeared 2' long and 1' wide.

It came down toward earth and for some reason made a 90° turn away. It moved with no sound. The next ^{day} another told me he saw the same thing.
