DAILY WEATHER MAPS

WEEKLY SERIES SEPT. 9-15, 1968

The charts in this publication are a continuation of the principal charts of the Weather Bureau publication, Daily Weather Map. They include the Surface Weather Map, the 500-Millibar Chart, the Highest and Lowest Temperatures Chart, and the Daily Precipitation Chart. All of the charts for one day are arranged on a single page of this publication. They are copied from operational weather maps prepared by the National Meteorological Center, Weather Bureau. The symbols used on the Surface Weather Map and the 500-Millibar Chart are the same as those used previously in Daily Weather Map. An explanatory sheet is available, and single copies may be obtained without charge by writing to: Environmental Science Services Administration, Publications Section, AD 142, Rockville, Maryland 20852. Bulk copies may also be ordered, at a cost of $2.30 per 50 copies. Checks should be made payable to the Superintendent of Documents.

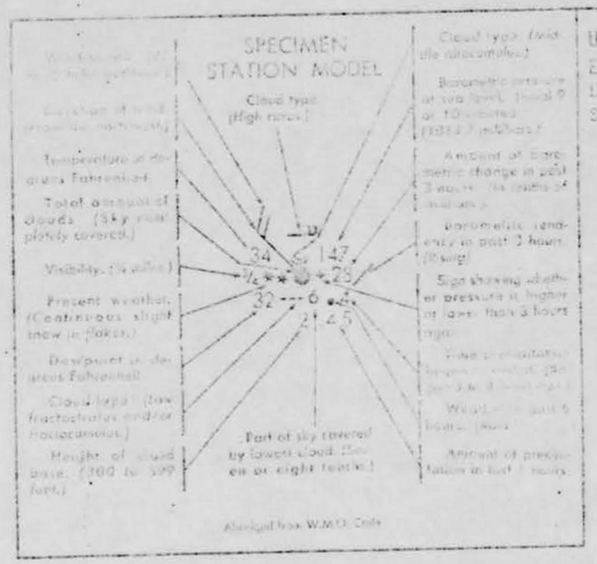

The Surface Weather Map presents station data and the analysis for 7:00 a.m./e.s.t. The tracks of well-defined low pressure areas are indicated by chains of arrows; the locations of these centers at times 6, 12, and 18 hours preceding map time are indicated by small black squares enclosing white crosses. Areas of precipitation are indicated by shading. The weather reports that are printed here are only a fraction of those that are included in the operational weather maps, and on which the analyses are based. Occational apparent discrepancies between the printed station data and the analyses result from those station reports that cannot be included in the published maps because of lack of space.

The 500-Millibar Chart presents the height contours and isotherms of the 500-millibar surface at 7:00 a.m./e.s.t. The height contours are shown as continuous lines, and are labeled in feet above sea level. The isotherms are shown as dashed lines, and are labeled in degrees Celsius. The arrows show the wind direction and speed at the 500-millibar level.

The Highest and Lowest Temperatures Chart presents the maximum and minimum values for the 24-hour period ending at 1:00 a.m./e.s.t. The names of the reporting points can be obtained from the Surface Weather Map. The maximum temperature is plotted above the station location, and the minimum temperature is plotted below this point.

The Precipitation Areas and Amounts Chart indicates by means of shading the areas that had precipitation during the 24 hours ending at 1:00 a.m. Amounts in inches to the nearest hundredth of an inch are for the same period. Incomplete totals are underlined. "T" indicates a trace of precipitation. Dashed lines show the depth of snow on the ground in inches as of 7:00 a.m. of the previous day.

DAILY WEATHER MAPS

WEEKLY SERIES SEPT. 16-22, 1968

The charts in this publication are a continuation of the principal charts of the Weather Bureau publication, Daily Weather Map. They include the Surface Weather Map, the 500-Millibar Chart, the Highest and Lowest Temperatures Chart, and the Daily Precipitation Chart. All of the charts for one day are arranged on a single page of this publication. They are copied from operational weather maps prepared by the National Meteorological Center, Weather Bureau. The symbols used on the Surface Weather Map and the 500-Millibar Chart are the same as those used previously in Daily Weather Map. An explanatory sheet is available, and single copies may be obtained without charge by writing to: Environmental Science Services Administration, Publications Section, AD 143, Rockville, Maryland 20852. Bulk copies may also be ordered, at a cost of $2.30 per 50 copies. Checks should be made payable to the Superintendent of Documents.

The Surface Weather Map presents station data and the analysis for 7:00 a.m./e.s.t. The tracks of well-defined low pressure areas are indicated by chains of arrows: the locations of these centers at times 6, 12, and 18 hours preceding map time are indicated by small black squares enclosing white crosses. Areas of precipitation are indicated by shading. The weather reports that are printed here are only a fraction of those that are included in the operational weather maps, and on which the analyses are based. Occational apparent discrepancies between the printed station data and the analyses result from those station reports that cannot be included in the published maps because of lack of space.

The 500-Millibar Chart presents the height contours and isotherms of the 500-millibar surface at 7:00 a.m./e.s.t. The height contours are shown as continuous lines, and are labeled in feet above sea level. The isotherms are shown as dashed lines, and are labeled in degrees Celsius. The arrows show the wind direction and speed at the 500-millibar level.

The Highest and Lowest Temperatures Chart presents the maximum and minimum values for the 24-hour period ending at 1:00 a.m./e.s.t. The names of the reporting points can be obtained from the Surface Weather Map. The maximum temperature is plotted above the station location, and the minimum temperature is plotted below this point.

The Precipitation Areas and Amounts Chart indicates by means of shading the areas that had precipitation during the 24 hours ending at 1:00 a.m. Amounts in inches to the nearest hundredth of an inch are for the same period. Incomplete totals are underlined. "T" indicates a trace of precipitation. Dashed lines show the depth of snow on the ground in inches as of 7:00 a.m. of the previous day.

DAILY WEATHER MAPS

WEEKLY SERIES SEPT. 23-29, 1968

The charts in this publication are a continuation of the principal charts of the Weather Bureau publication, Daily Weather Map. They include the Surface Weather Map, the 500-Millibar Chart, the Highest and Lowest Temperatures Chart, and the Daily Precipitation Chart. All of the charts for one day are arranged on a single page of this publication. They are copied from operational weather maps prepared by the National Meteorological Center, Weather Bureau. The symbols used on the Surface Weather Map and the 500-Millibar Chart are the same as those used previously in Daily Weather Map. An explanatory sheet is available, and single copies may be obtained without charge by writing to: Environmental Science Services Administration, Publications Section, AD 143, Rockville, Maryland 20852. Bulk copies may also be ordered, at a cost of $2.30 per 50 copies. Checks should be made payable to the Superintendent of Documents.

The Surface Weather Map presents station data and the analysis for 7:00 a.m./e.s.t. The tracks of well-defined low pressure areas are indicated by chains of arrows; the locations of these centers at times 6, 12, and 18 hours preceding map time are indicated by small black squares enclosing white crosses. Areas of precipitation are indicated by shading. The weather reports that are printed here are only a fraction of those that are included in the operational weather maps, and on which the analyses are based. Occational apparent discrepancies between the printed station data and the analyses result from those station reports that cannot be included in the published maps because of lack of space.

The 500-Millibar Chart presents the height contours and isotherms of the 500-millibar surface at 7:00 a.m./e.s.t. The height contours are shown as continuous lines, and are labeled in feet above sea level. The isotherms are shown as dashed lines, and are labeled in degrees Celsius. The arrows show the wind direction and speed at the 500-millibar level.

The Highest and Lowest Temperatures Chart presents the maximum and minimum values for the 24-hour period ending at 1:00 a.m./e.s.t. The names of the reporting points can be obtained from the Surface Weather Map. The maximum temperature is plotted above the station location, and the minimum temperature is plotted below this point.

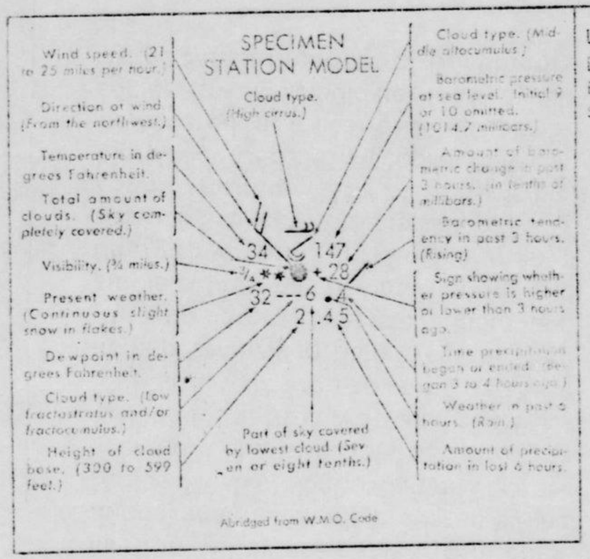

The Precipitation Areas and Amounts Chart indicates by means of shading the areas that had precipitation during the 24 hours ending at 1:00 a.m. Amounts in inches to the nearest hundredth of an inch are for the same period. Incomplete totals are underlined. "T" indicates a trace of precipitation. Dashed lines show the depth of snow on the ground in inches as of 7:00 a.m. of the previous day.

12. GIVE A BRIEF DESCRIPTION OF THE PHENOMENON, INDICATING WHETHER IT APPEARED DARK OR LIGHT, WHETHER IT REFLECTED LIGHT OR WAS SELF-LUMINOUS AND WHAT COLORS YOU NOTICED. DESCRIBE YOUR IMPRESSION OF WHETHER IT WAS SOLID OR TRANSPARENT, WHETHER EDGES WERE SHARP OR FUZZY. DESCRIBE THE SHAPE OR INDICATE IF IT APPEARED AS A POINT OF LIGHT. INDICATE COMPARISONS WITH OTHER OBSERVED OBJECTS, LIKE STARS, A LIGHT OR OTHER OBJECT IN YOUR FIELD OF VIEW.

THE OBJECT LOOKED LIKE TWO HEADLIGHTS WITH A SMALL RED LIGHT LOCATED BETWEEN THEM. THE OBJECT WAS SELF-LUMINOUS AND VERY BRIGHT. IT WAS ABOUT THE SIZE OF A PENNY HELD AT ARMS LENGTH. THE SHAPE WAS NOT REALLY discernable BUT THE LIGHTS WERE ON THE HORIZONTAL PLANE, GIVING AN ELONGATED ILLUSION. IT COULD NOT BE COMPARED TO ANYTHING IN THE SKY. IT COULD BE COMPARED TO A CAR WITH A RED RUNNING LIGHT FROM ABOUT TWO BLOCKS AWAY.

6A. NOW IMAGINE YOU ARE AT THE CENTER OF THE COMPASS ROSE. PLACE AN "A" ON THE COMPASS TO INDICATE THE DIRECTION TO THE PHENOMENON WHEN FIRST SEEN. PLACE A "B" ON THE COMPASS TO INDICATE THE DIRECTION TO THE PHENOMENON WHEN LAST SEEN.

7. IN THE SKETCH BELOW, PLACE AN "A" AT THE POSITION OF THE PHENOMENON WHEN FIRST SEEN, AND A "B" AT THE POSITION OF THE PHENOMENON WHEN LAST SEEN. CONNECT THE "A" AND "B" WITH A LINE TO APPROXIMATE THE MOVEMENT OF THE PHENOMENON BETWEEN "A" AND "B". THAT IS, SCHEMATICALLY SHOW WHETHER THE MOVEMENT APPEARED TO BE STRAIGHT, CURVED OR ZIG-ZAG. REFER TO SMALLER SKETCH AS AN EXAMPLE OF HOW TO COMPLETE THE LARGER SKETCH.

A. HOW DID IT FINALLY DISAPPEAR?

THE OBJECT APPARENTLY TOOK A PATH NORMAL TO THE TANGENT OF THE EARTH AT MEMPHIS, TENN. THE OBJECT DID NOT FADE OUT, BUT JUST DISAPPEARED.

B. DID THE PHENOMENON MOVE BEHIND OR IN FRONT OF SOMETHING, LIKE A CLOUD, TREE, OR BUILDING AT ANY TIME?
☐ YES ☒ NO. IF "YES," DESCRIBE.

15. DRAW A PICTURE THAT WILL SHOW THE SHAPE OF THE PHENOMENON. INCLUDE AND LABEL ANY DETAILS THAT MIGHT HAVE APPEARED AS WINGS OR PROTRUSIONS, AND INDICATE EXHAUST OR VAPOR TRAILS. INDICATE BY AN ARROW THE DIRECTION THE PHENOMENON WAS MOVING.

20. IN ORDER THAT WE MAY OBTAIN AS CLEAR A PICTURE AS POSSIBLE OF WHAT YOU SAW, DESCRIBE IN YOUR OWN WORDS A COMMON OBJECT OR OBJECTS WHICH, WHEN PLACED IN THE SKY, SIMILAR TO WHERE YOU NOTED THE PHENOMENON, WOULD BEAR SOME RESEMBLANCE TO WHAT YOU SAW. DESCRIBE SIMILARITIES AND DIFFERENCES BETWEEN THE COMMON OBJECT AND WHAT YOU SAW.

A CAR WITH ONLY TWO HEADLIGHTS AND A RED RUNNING LIGHT IN THE CENTER WOULD APPEAR EXACTLY AS THE OBJECT. THERE DID NOT SEEM TO BE ANY TYPE OF CONNECTION BETWEEN THE LIGHTS.

Dear Sir,

I appreciate the interst in the sighting. I have filled out the form to the best of my ability, and it is correct to my knowledge.

In the letter I received it stated that I would also receive one Blue Book. As of this date, I have not received a copy of the Blue Book. Since several of us here are very interested in UFO's, we would appreciate any information avialable to us.

Thank you very much.

Sincerely

September 30, 1968

Dear Sir;

I would like to report a sighting of an UFO. I am a sophmore at Christian Brothers College in Memphis, Tennessee, majoring in Electrical Engineering. The following is what occured:

"It was about 9:08 PM on Monday September 30, 1968, when I left our campus radio station. I had been talking to [redacted], the Chief Engineer, about the distortion of the audio. I told him that I was going back to the room and listen in. I just got out in the open, when I looked up and spotted an object about the size of a dime held at arms length. I watched it for a few seconds, and then realized that there was no sound. Since both [redacted] and I are UFO enthusiasts, I ran back down to the station and told him about it. He came back with me, and we watched it for about two minutes. The object was a reddish color which seemed to fade once in a while. It was also constant, that is it did not flash. We also noticed that it had a sort of football shape. The object seemed to be at a fairly high altitude, but we were convinced that it was not an aircraft because it did not have the proper marking lights, and the course seemed to be irradict. We watched it till it seemed to turn to the east, and vanished. The entire incident lasted aproximately two minutes and thirty seconds. This is not the first time we've seen one, but this is the first one I am reporting in writing. The others we reported to the Milington Naval Air Station, but this time they told me to write."

SUBJECT: UFO SIGHTING: 23 September 1968/Whitefield, Maine/2:30 AM EDT

DATE: 9 October 1968

FROM: Raymond E. Fowler, Chairman

TO: NICAP, Washington, D.C. CC: FTD (TDETR) USAF

BACKGROUND:

I received a telephone call from Rev. [redacted] who had phoned NICAP in Washington and had been referred to me. The date of his phone call to me was September 24th. I assigned Herbert Eismann to the case and his report of the interview is as follows.

INVESTIGATORS REPORT: (Herber Eismann)

I met with Rev. [redacted] on Wednesday evening, September 25, 1968 at which time he gave me a complete narrative of his sighting and turned over a piece of material to me which he felt should be analyzed. This material was found at his farm during the first week of August 1968. He claims that the material was there in the morning but was definitely not there the evening before. He does not know whether there is any connection between the sighting and finding the material but felt we might be interested in having it analyzed. He did show the piece to a Geology Professor in Maine who said he could not identify the material. (Did not lab-check it).

As far as the sighting is concerned, the following are additional facts not covered in the attached narrative and report form.

The object appeared as if it were darker in the center and although an outline/shape could be seen it was also diffused. There is a power line about a quarter of a mile from the farm to the West but the sighting was not in this direction. One thing was mentioned which Rev. Kittredge thought was most unusual and that was he could not hear the river at all during the sighting. It is usually quite loud but he actually listened for it through an open window and could not hear it. He seemed to be a sincere and responsible individual seeking no publicity.

CHAIRMANS COMMENTS:

Although it was clear when the witness retired and when he got up later in the morning after the sighting - during the sighting it was overcast. This is strange as actual weather observations at Portland, Maine were that of clear weather, no clouds. Local mist or perhaps something related to the UFO could explain this discrepancy. Lack of noise from river interesting. Enclosing material mentioned. He found two pieces about 1" by 2" long. It looks like foam plastic and probably has no connection with UFOs.

UFO SIGHTING REPORT

I. PERSONAL ACCOUNT

In your own words, Please describe the incident as it happened. (If additional pages are needed, be sure they are numbered.)

The location of the farm is in Whitefield, Maine...in an area the natives refer to as Kings Mills. I bought the farm three years ago and spend vacations there and odd days when I can slip away for a little while. Last summer...in late July or the first part of August...I found the enclosed material on the lawn not far from the back door. I have had it ever since then trying to get someone to identify it and I would not have sent it on to you but for what happened last Monday morning. Whether the two things are related or not, I do not know, but they might possibly be. I am not saying they are or that they are not. Perhaps the substance is some common material, but, no one knows how it got there...we know that it is was not there the night before and no one put it there as far as we know.

At this time of year, there is comparatively little traffic on Route #218. The area is country and there is no industry anywhere around. The neighbor's house is used only occasionally and at the time I am speaking about, the house was empty. September 22, Sunday afternoon, there was a hard but very short shower during the afternoon..not an electrical storm. The evening was beautifully clear and warm. The stars were beautiful. I went to bed about 9:30 PM. At about 2:30 AM (I did not at any time turn on any lights or use a flashlight...I am estimating the time from a downstairs Westminster chime clock) I awoke somewhat and in turning over in bed I noticed what appeared to be two rays of soft yellow-orange light on the dresser about the same height from the floor as the lower sill of the window. At the time I thought how nice it was to have the moon coming up to add to the beautiful night. As I closed my eyes and thought about getting back to sleep, I decided to step into the lavatory first. I swung

my feet from the bed to the floor and again noticed the soft rays of light but did not pay too much attention to them this time as I had already passed them off as moon-beams. Then I went into the lavatory and saw an orange-colored object which I thought to be the moon. I was not entirely awake, then, while still in the lavatory, a few seconds later, I realized that something was wrong and that it could not be the moon because the moon just did not rise in that part of the sky (too far North anyway) and afterward I noted that heavy overcast had set in during the night and there were no stars visible anywhere. At the time I began to realize something was wrong, I tried to move my head to see the object through another window pane assuming that I had a distorted vision because of imperfect window glass. Nothing changed at all and as I realized with a start what I was seeing (NOT the moon), it just went out or vanished just like that. It was as if someone had pulled the plug. There was no after-image. It just went out. There was no sound. I had both bedroom windows open. The bathroom window was closed. There was no sound and nothing out of the ordinary that I could speak about. Afterwards, it was the same as before.

Now the size of the object, at the closest possible point, depending upon the distance of course, I would estimate to be from 6 feet ... at the closest possible point. 30 feet at the farthest point. The shape of the object I am vague on..perhaps longer that it was wide...more like two deep saucers or vegetable dishes placed with concave sections together, standing on edge with a side toward you. The color was orange-red or yellow-orange.

I would like to make a few remarks about the light on the dresser in the bedroom. Looking back, there appeared to be two separate light beams - something like two separate flashlight beams but these beams were not round but oval,shaped more like a pencil. I would say that they were seven or eight inches long and an inch or so across. It is odd that they should be separated since the window was open and there was nothing to break the beam unless, of course, there were two separate beams. The light reflections were horizontal and the beams were about four or five inches apart. The bottom half of the window was completely open and shade was pulled down to the open spot. There were no window panes, sashes, outside trees or anything to interfere with the light(s).

Monday morning I looked around and of course could find absolutely nothing. I went over everything a dozen times so that I knew what I could say I saw and what I would have to say I did not see. I returned to Salisbury, Mass. Monday evening. Tuesday morning I called NICAP, Washington to find out who to tell of my experience. You gave me the name of a party in Wenham, Mass. (Raymond Fowler, Chairman, NICAP MASS SUBCOM).

I have always believed in extra-terrestrial objects in our atmosphere. I have subscribed to your paper since it was early printed and have bought everything I could get on the matter. I used to kick in a little more money to you than I have been. The annual five bucks seems to be about all I can handle now. I have a 3" refractor scope I get out with sometimes in the summer when the weather is right. Strictly an amatuer. I never

have seen anything like this. Once, driving through the White Mountains with my wife about ten years ago, we were both startled by what appeared to be an airliner swoosh across our path dead ahead of us. All we could make out was the fact that there were numerous round, single-pane windows along the side of the object like an airliner. It was at night. There was no noise and no light other than our headlights and the lights inside the object. We remember the event. We seldom speak of it but now it comes back to us and we know no airliner could be that close to the ground and be that big and be absolutely silent in flight. So, now I shall always wonder about this last objects. Next time I go to the farm, I probably will sit up all night waiting for another show.

DAILY WEATHER MAPS

WEEKLY SERIES SEPT. 30-OCT. 6, 1968

DEPT. MPO

The charts in this publication are a continuation of the principal charts of the Weather Bureau publication, Daily Weather Map. They include the Surface Weather Map, the 500-Millibar Chart, the Highest and Lowest Temperatures Chart, and the Daily Precipitation Chart. All of the charts for one day are arranged on a single page of this publication. They are copied from operational weather maps prepared by the National Meteorological Center, Weather Bureau. The symbols used on the Surface Weather Map and the 500-Millibar Chart are the same as those used previously in Daily Weather Map. An explanatory sheet is available, and single copies may be obtained without charge by writing to: Environmental Science Services Administration, Publications Section, AD 143, Rockville, Maryland 20852. Bulk copies may also be ordered, at a cost of $2.30 per 50 copies. Checks should be made payable to the Superintendent of Documents.

The Surface Weather Map presents station data and the analysis for 7:00 a.m./e.s.t. The tracks of well-defined low pressure areas are indicated by chains of arrows; the locations of these centers at times 6, 12, and 18 hours preceding map time are indicated by small black squares enclosing white crosses. Areas of precipitation are indicated by shading. The weather reports that are printed here are only a fraction of those that are included in the operational weather maps, and on which the analyses are based. Occational apparent discrepancies between the printed station data and the analyses result from those station reports that cannot be included in the published maps because of lack of space.

The 500-Millibar Chart presents the height contours and isotherms of the 500-millibar surface at 7:00 a.m./e.s.t. The height contours are shown as continuous lines, and are labeled in feet above sea level. The isotherms are shown as dashed lines, and are labeled in degrees Celsius. The arrows show the wind direction and speed at the 500-millibar level.

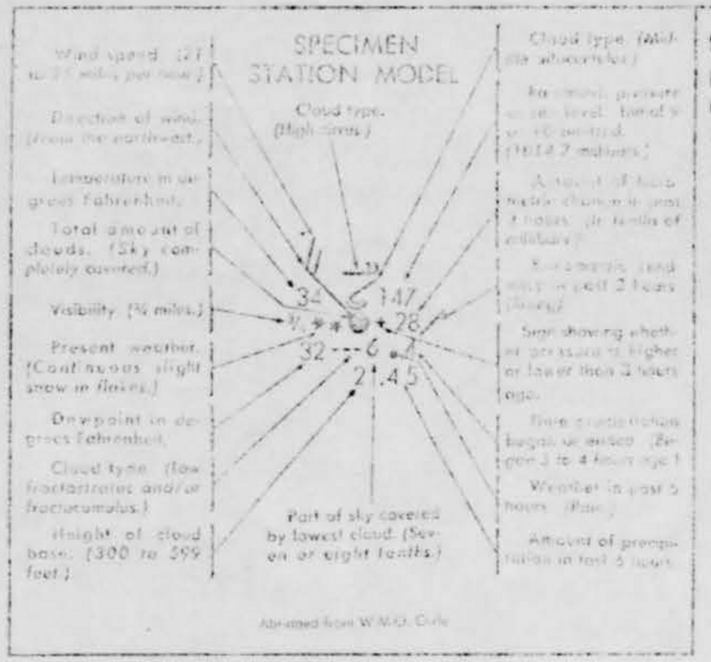

TheHighest and Lowest Temperatures Chart presents the maximum and minimum values for the 24-hour period ending at 1:00 a.m./e.s.t. The names of the reporting points can be obtained from the Surface Weather Map. The maximum temperature is plotted above the station location, and the minimum temperature is plotted below this point.

The Precipitation Areas and Amounts Chart indicates by means of shading the areas that had precipitation during the 24 hours ending at 1:00 a.m. Amounts in inches to the nearest hundredth of an inch are for the same period. Incomplete totals are underlined. "T" indicates a trace of precipitation. Dashed lines show the depth of snow on the ground in inches as of 7:00 a.m. of the previous day.

DAILY WEATHER MAPS

WEEKLY SERIES SEPT 2-8, 1968

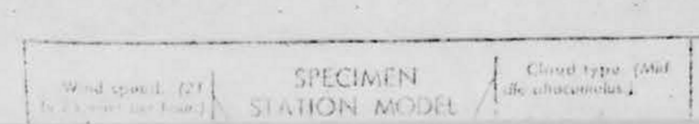

The charts in this publication are a continuation of the principal charts of the Weather Bureau publication, Daily Weather Map. They include the Surface Weather Map, the 500-Millibar Chart, the Highest and Lowest Temperatures Chart, and the Daily Precipitation Chart. All of the charts for one day are arranged on a single page of this publication. They are copied from operational weather maps prepared by the National Meteorological Center, Weather Bureau. The symbols used on the Surface Weather Map and the 500-Millibar Chart are the same as those used previously in Daily Weather Map. An explanatory sheet is available, and single copies may be obtained without charge by writing to: Environmental Science Services Administration, Publications Section, AD 143, Rockville, Maryland 20852. Bulk copies may also be ordered, at a cost of $2.30 per 50 copies. Checks should be made payable to the Superintendent of Documents.

The Surface Weather Map presents station data and the analysis for 7:00 a.m./e.s.t. The tracks of well-defined low pressure areas are indicated by chains of arrows; the locations of these centers at times 6, 12, and 18 hours preceding map time are indicated by small black squares enclosing white crosses. Areas of precipitation are indicated by shading. The weather reports that are printed here are only a fraction of those that are included in the operational weather maps, and on which the analyses are based. Occational apparent discrepancies between the printed station data and the analyses result from those station reports that cannot be included in the published maps because of lack of space.

The 500-Millibar Chart presents the height contours and isotherms of the 500-millibar surface at 7:00 a.m./e.s.t. The height contours are shown as continuous lines, and are labeled in feet above sea level. The isotherms are shown as dashed lines, and are labeled in degrees Celsius. The arrows show the wind direction and speed at the 500-millibar level.

TheHighest and Lowest Temperatures Chart presents the maximum and minimum values for the 24-hour period ending at 1:00 a.m./e.s.t. The names of the reporting points can be obtained from the Surface Weather Map. The maximum temperature is plotted above the station location, and the minimum temperature is plotted below this point.

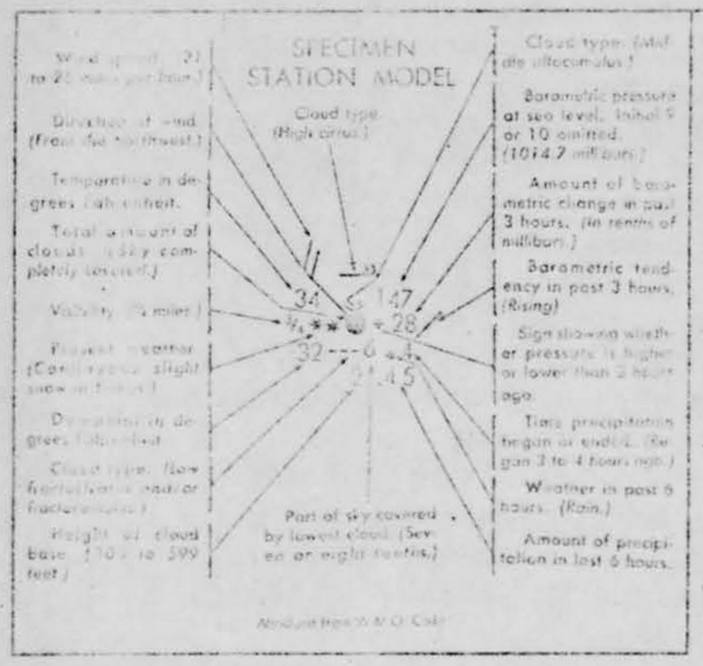

The Precipitation Areas and Amounts Chart indicates by means of shading the areas that had precipitation during the 24 hours ending at 1:00 a.m. Amounts in inches to the nearest hundredth of an inch are for the same period. Incomplete totals are underlined. "T" indicates a trace of precipitation. Dashed lines show the depth of snow on the ground in inches as of 7:00 a.m. of the previous day.

15. DRAW A PICTURE THAT WILL SHOW THE SHAPE OF THE PHENOMENON. INCLUDE AND LABEL ANY DETAILS THAT MIGHT HAVE APPEARED AS WINGS OR PROTRUSIONS, AND INDICATE EXHAUST OR VAPOR TRAILS. INDICATE BY AN ARROW THE DIRECTION THE PHENOMENON WAS MOVING.

16. WHAT WAS THE ANGULAR SIZE? HOLD A MATCH AT ARM'S LENGTH IN FRONT OF A KNOWN OBJECT, SUCH AS A STREET LAMP OR THE MOON. NOTE HOW MUCH OF THE OBJECT IS COVERED BY THE HEAD OF THE MATCH. NOW IF YOU HAD BEEN ASLE TO PERFORM THIS EXPERIMENT AT THE TIME OF THE SIGHTING, ESTIMATE WHAT FRACTION OF THE PHENOMENON WOULD HAVE BEEN COVERED BY THE MATCH HEAD.
