NUMBER 21-R258

THIS QUESTIONNAIRE HAS BEEN PREPARED SO THAT YOU CAN GIVE THE U.S. AIR FORCE AS MUCH INFORMATION AS POSSIBLE CONCERNING THE UNIDENTIFIED PHENOMENON THAT YOU HAVE OBSERVED. PLEASE TRY TO ANSWER ALL OF THE QUESTIONS. THE INFORMATION YOU GIVE WILL BE USED FOR RESEARCH PURPOSES. YOUR NAME WILL NOT BE USED IN CONNECTION WITH ANY OF YOUR STATEMENTS OR CONCLUSIONS WITHOUT YOUR PERMISSION. RETURN TO AIR FORCE BASE INVESTIGATOR FOR FORWARDING TO FTD (TDETR), WRIGHT-PATTERSON AFB, OHIO 45433, IAW AFR 80-17. (IF ADDITIONAL SHEETS ARE NEEDED FOR NARRATIVE OR SKETCHES ATTACH SECURELY TO THIS FORM OR ANNOTATE WITH YOUR NAME FOR IDENTIFICATION.)

1. WHEN DID YOU SEE THE PHENOMENON?

2. WHAT TIME DID YOU FIRST SIGHT THE PHENOMENON?

answer in back of this sheet HOUR _____ MINUTES _____ ☐ A.M. ☒ P.M.

3. WHAT TIME DID YOU LAST SIGHT THE PHENOMENON?

answer in back of this sheet HOUR _____ MINUTES _____ ☐ A.M. ☒ P.M.

5. WHERE WERE YOU WHEN YOU SAW THE PHENOMENON? IF IN CITY, GIVE THE NEAREST STREET ADDRESS AND INDICATE ON A HAND DRAWN MAP WHERE YOU WERE STANDING WITH REFERENCE TO THE ADDRESS. IF IN THE COUNTRY, IDENTIFY THE HIGHWAY YOU WERE ON OR NEAR AND TRY TO FIX A DISTANCE AND DIRECTION FROM SOME RECOGNIZABLE LANDMARK.

I was in my home facing the road. The road is numbered 312. When it disappeared in the west side, I would come out of the house to see it disappear over the horizon.

6. IMAGINE YOU ARE AT THE POINT SHOWN IN THE SKETCH, PLACE AN "A" ON THE CURVED LINE TO SHOW HOW HIGH THE PHENOMENON WAS ABOVE THE HORIZON, OR SKYLINE, WHEN FIRST SEEN. PLACE A "B" ON THE SAME CURVED LINE TO SHOW HOW HIGH ABOVE THE HORIZON THE PHENOMENON WAS WHEN LAST SEEN.

The object was first seen coming "A" over the horizon in the East direction and it traveled across the sky in a dome-shaped direction until it disappeared in the West.

Answers to questions 2 & 3 - Since at the beginning
I didn't pay much attention
to this object, I can't say at
what time it appeared and at
what time it disappeared.
Besides it appeared more
than once. What I can
say is that during the two
sightings, it traveled across the
sky from about 7:30 to 8:15 each
night delaying itself some minutes.
Sometimes it would fool us and
come later ^{or} earlier. When it came
earlier, we would just see it
about to disappear over the
horizon.

6A. NOW IMAGINE YOU ARE AT THE CENTER OF THE COMPASS ROSE. PLACE AN "A" ON THE COMPASS TO INDICATE THE DIRECTION TO THE PHENOMENON WHEN FIRST SEEN. PLACE A "B" ON THE COMPASS TO INDICATE THE DIRECTION TO THE PHENOMENON WHEN LAST SEEN.

When I first saw the object in the late part of Nov., it was traveling in the sky from east to west in a dome-shaped direction.

The second time I saw the object in the later part of Feb., it was traveling from west to east in a dome-shaped direction. This object was seen for several nights.

7. IN THE SKETCH BELOW, PLACE AN "A" AT THE POSITION OF THE PHENOMENON WHEN FIRST SEEN, AND A "B" AT THE POSITION OF THE PHENOMENON WHEN LAST SEEN. CONNECT THE "A" AND "B" WITH A LINE TO APPROXIMATE THE MOVEMENT OF THE PHENOMENON BETWEEN "A" AND "B". THAT IS, SCHEMATICALLY SHOW WHETHER THE MOVEMENT APPEARED TO BE STRAIGHT, CURVED OR ZIG-ZAG. REFER TO SMALLER SKETCH AS AN EXAMPLE OF HOW TO COMPLETE THE LARGER SKETCH.

Answer to question 18. I would estimate that it traveled
at about double the speed of a jet.
Since a jet travels in a straight line
and this object traveled in a
dome-shaped line, that is what I estimate

Answer to question 19 - If a plane were traveling at a height of
25,000 ft. from the ground, then this object was
flying at the height of 50,000 or 60,000 ft from
the ground.

A. DID THE PHENOMENON DISTURB THE GROUND OR LEAVE ANY PHYSICAL EVIDENCE. ☐ YES ☒ NO. IF "YES," DESCRIBE.

27. INFORMATION WHICH YOU FEEL IS PERTINENT BUT WHICH IS NOT ADEQUATELY COVERED IN THIS QUESTIONNAIRE, ALTERNATIVELY PROVIDE A NARRATIVE EXPLANATION OF THE SIGHTING.

This object may be known but since officials in the White House in Washington, D.C. couldn't give me an explanation perhaps you can. I just want to know what it is.

This object was first seen by me in the later part of November. This object looks like a star and shines like a star. During the course it took every night, it would sometimes give a slight jerk to the right or left and continue on its journey. It first appeared on the South side but traveling from East to West until the last night, when it would come out in the North; but still traveling from East to West. Every night it would travel about 15 degrees as shown in the drawing on question No. 6 in the questionnaire. It would take about 8 minutes to travel across the sky.

Then when it appeared again in the later part of February, it was traveling from West to East. This time it would come out on the North Side. We only saw it this time for about 4 nights because the rest of the nights were cloudy.

If it does appear again, I would think it will come around the last part of May from what I have estimated. I estimated this from the first two sightings.

If some of the questions in the questionnaire are wrongly answered, it is because I misunderstood them. I have tried to answer them as best I can. Some I might not have answered because they refer to an object seen only once and I saw this one several nights.

22. HAVE YOU EVER SEEN THIS OR A SIMILAR PHENOMENON BEFORE? ☒ YES ☐ NO. IF "YES," GIVE DATE AND LOCATION.

I saw the same object several nights at a time.

23. WAS ANYONE WITH YOU AT THE TIME YOU SAW THE PHENOMENON? ☒ YES ☐ NO. IF "YES," DID THEY SEE IT TOO? ☒ YES ☐ NO.

Attention: B.M. Ettenson
Colonel, USAF

Dear Colonel Ettenson:

On April 2, 1969 you answered a letter I wrote to the White House on a UFO I had been seeing. You sent me a UFO questionnaire to fill out because you were unable to give me an explanation. I filled out the questionnaire and sent it in the envelope you attached which was addressed to Wright-Patterson Air Force Base in Ohio. I have not received an evaluation as of this date even though I know it takes time.

On May 13, 1969, I wrote to Ramey Air Force Base in Aguadilla here in Puerto Rico to see if they could give me an explanation because I had not received an answer from Wright-Patterson AFB. Before I received an answer to that letter, I started seeing the object again on May 18. I immediately wrote them a letter to let them know so that they could be on the lookout for it. I didn't telephone, first of all, because we do not have a telephone or one nearby us that we could use. Besides we have a car in case of an emergency. Second, because that object takes ten minutes to travel across the sky and by the time I get a call through and they launch an aircraft to investigate, it will have disappeared.

It seems that the letter I wrote on May 13, 1969 to Ramey Air Force Base was forwarded to New York and I received an answer from there. The return address was as follows. HQ 72d Cmbt Spt Gp (BC) APO New York 09845. The one who answered this letter was James T. Brothers, Colonel, USAF, Base Commander. He stated in the letter that they were unable to give me an explanation of my sightings and that if I should see it again to get a call through to the Puerto Rico Air National Guard in Isla Verde Airport here in Puerto Rico so that they could launch an aircraft to investigate. As I told you before, I am unable to do so. I have not received an answer to the second letter I wrote to Ramey AFB. I wrote them this second letter on May 19 in the morning. On May 20 during the night, it was cloudy and I was unable to observe the object but I did see an airplane travel in the exact direction I had indicated to them. I am almost sure it was an Air Force plane because it made a tremendous noise like a super-sonic airplane.

June 11, 1969

Believe me, I wouldn't give it a second thought to call if I had a telephone nearby.

The object has since disappeared for this time. I had stated in the questionnaire that it would appear again in May and it did. Now from my other sightings, I expect it back in August.

I also write this letter because since this object has disappeared during this last sighting, we have seen three more going in different directions even though not in the same night. One in particular traveled very fast. We know they are not airplanes because their lights are like stars and airplanes travel at night with a red light. Am I right?

There are people who have told my brother that they had seen the object during this May sighting two hours and forty-five minutes later during the same night. I did some arithmetic to see at what time it would appear the following night and it came a half hour earlier. Our relatives, neighbors, and friends have commented on these objects with us but they say they have not written to anybody or given it much attention.

Last night I saw one travel from North to South in a dome-shaped direction. I am going to watch for it tonight.

I write to you because in my belief these objects aren't being given the attention they deserve here in Puerto Rico. I am giving the Air Force my fullest cooperation and yet I see no results.

I know you have a lot of work to cope with but this is a concern of the Air Force.

Perhaps you might like to forward this letter to Wright-Patterson AFB in Ohio. It might help them further in the evaluation. I would have written them a letter but when I sent the questionnaire, it skipped my mind to write down the address in case I should have more information for them.

Forgive me for intruding on your time but I feel it is my duty to supply such information.

Thank you for your time and cooperation.

Cordially yours,

Mis

Dear Sirs,

About a month ago several residents of Manchester saw a unusual craft. The craft was very silent, had red lights on it turning around the craft, no other colored lights, and a huge spotlight on the bottom of the craft.

There were several cases. One was when some ladies were coming home from bowling. The craft hovered over their car and turned on its light. Another case was when the craft hovered over a house, turned on its spotlight and lit up the house.

I have heard that this craft is an experimental aircraft that will be used for jungle night flying. I do not believe this.

I want to know the truth about this craft. I read books and they say that you're not very good on giving answers.

I have a map on the other page. It will show you the general direction that the craft went.

7. IN THE SKETCH BELOW, PLACE AN "A" AT THE POSITION OF THE PHENOMENON WHEN FIRST SEEN, AND A "B" AT THE POSITION OF THE PHENOMENON WHEN LAST SEEN. CONNECT THE "A" AND "B" WITH A LINE TO APPROXIMATE THE MOVEMENT OF THE PHENOMENON BETWEEN "A" AND "B". THAT IS, SCHEMATICALLY SHOW WHETHER THE MOVEMENT APPEARED TO BE STRAIGHT, CURVED OR ZIG-ZAG. DAILY WEATHER MAPS

WEEKLY SERIES NOV. 4 -10, 1968

*Send to
USF
Office.*

The charts in this publication are a continuation of the principal charts of the Weather Bureau publication, Daily Weather Map. They include the Surface Weather Map, the 500-Millibar Chart, the Highest and Lowest Temperatures Chart, and the Daily Precipitation Chart. All of the charts for one day are arranged on a single page of this publication. They are copied from operational weather maps prepared by the National Meteorological Center, Weather Bureau. The symbols used on the Surface Weather Map and the 500-Millibar Chart are the same as those used previously in Daily Weather Map. An explanatory sheet is available, and single copies may be obtained without charge by writing to: Environmental Science Services Administration, Publi-

The Surface Weather Map presents station data and the analysis for 7:00 a.m./e.s.t. The tracks of well-defined low pressure areas are indicated by chains of arrows; the locations of these centers at times 6, 12, and 18 hours preceding map time are indicated by small black squares enclosing white crosses. Areas of precipitation are indicated by shading. The weather reports that are printed here are only a fraction of those that are included in the operational weather maps, and on which the analyses are based. Occasional apparent discrepancies between the printed station data and the analyses result from those station reports that cannot be included in the published maps because of lack of space.

The 500-Millibar Chart presents the height contours and isotherms of the

shown as dashed lines, and are labeled in degrees Celsius. The arrows show the wind direction and speed at the 500-millibar level.

The Highest and Lowest Temperatures Chart presents the maximum and minimum values for the 24-hour period ending at 1:00 a.m./e.s.t. The names of the reporting points can be obtained from the Surface Weather Map. The maximum temperature is plotted above the station location, and the minimum temperature is plotted below this point.

The Precipitation Areas and Amounts Chart indicates by means of shading the areas that had precipitation during the 24 hours ending at 1:00 a.m. Amounts in inches to the nearest hundredth of an inch are for the same

stations section, RD 145, Rockville, Maryland 20852. Bulk copies may also be ordered, at a cost of \$2.30 per 50 copies. Checks should be made payable to the Superintendent of Documents.

500-millibar surface at 7:00 a.m./e.s.t. The height contours are shown as continuous lines, and are labeled in feet above sea level. The isotherms are

period. Incomplete totals are underlined. "T" indicates a trace of precipitation. Dashed lines show the depth of snow on the ground in inches as of 7:00 a.m. of the previous day.

DAILY WEATHER MAPS

WEEKLY SERIES NOV. 18-24, 1968

SEND TO
WFO

The charts in this publication are a continuation of the principal charts of the Weather Bureau publication, Daily Weather Map. They include the Surface Weather Map, the 500-Millibar Chart, the Highest and Lowest Temperatures Chart, and the Daily Precipitation Chart. All of the charts for one day are arranged on a single page of this publication. They are copied from operational weather maps prepared by the National Meteorological Center, Weather Bureau. The symbols used on the Surface Weather Map and the 500-Millibar Chart are the same as those used previously in Daily Weather Map. An explanatory sheet is available, and single copies may be obtained without charge by writing to: Environmental Science Services Administration, Publications Section, AD 143, Rockville, Maryland 20852. Bulk copies may also be ordered, at a cost of \$2.30 per 50 copies. Checks should be made payable to the Superintendent of Documents.

The Surface Weather Map presents station data and the analysis for 7:00 a.m./e.s.t. The tracks of well-defined low pressure areas are indicated by chains of arrows; the locations of these centers at times 6, 12, and 18 hours preceding map time are indicated by small black squares enclosing white crosses. Areas of precipitation are indicated by shading. The weather reports that are printed here are only a fraction of those that are included in the operational weather maps, and on which the analyses are based. Occasional apparent discrepancies between the printed station data and the analyses result from those station reports that cannot be included in the published maps because of lack of space.

The 500-Millibar Chart presents the height contours and isotherms of the 500-millibar surface at 7:00 a.m./e.s.t. The height contours are shown as continuous lines, and are labeled in feet above sea level. The isotherms are

shown as dashed lines, and are labeled in degrees Celsius. The arrows show the wind direction and speed at the 500-millibar level.

The Highest and Lowest Temperatures Chart presents the maximum and minimum values for the 24-hour period ending at 1:00 a.m./e.s.t. The names of the reporting points can be obtained from the Surface Weather Map. The maximum temperature is plotted above the station location, and the minimum temperature is plotted below this point.

The Precipitation Areas and Amounts Chart indicates by means of shading the areas that had precipitation during the 24 hours ending at 1:00 a.m. Amounts in inches to the nearest hundredth of an inch are for the same period. Incomplete totals are underlined. "T" indicates a trace of precipitation. Dashed lines show the depth of snow on the ground in inches as of 7:00 a.m. of the previous day.
