From: Section 40
 Sent: 10 December 2002 16:45
 To: DISSY; DI55B
 Subject: FW: Section 40 House of Lords Debate on UFOs

Dear Section 40
 Please see the attached note from Section 40 advising that they have released the documents which found on file DI55/108/15/1 part 32. Section 40 suggests that the file should be annotated to show which papers have been released. I am happy to do this if you are too busy. Thanks
 Section 40

-----Original Message-----
 From: Section 40
 Sent: 10 December 2002 16:34
 To: Section 40
 Subject: Section 40 House of Lords Debate on UFOs

Teresa

The documents on the House of Lords Debate on UFOs which you kindly found for the Code request made by Section 40 have now been released to him along with some other documents from one of our files. The Code says that when material is released, the file should be noted accordingly. I would, therefore, be grateful if you could arrange for a note to be put on the Minute side of the file (DI55/108/15/1 Part 32). I suggest something along the lines of the following;

Enclosures 1/1, 1/2, 1/3 and 1/4 from this file were released into the public domain on 9 December 2002 following a request made under the Code of Practice on Access to Government Information by Section 40. Names and signatures of individuals were removed in accordance with the Data Protection Act 1998.

Further details can be found on Directorate of Air Staff file D/DAS/64/3/11 - Part C - UFO Persistent Correspondent - Section 40

Thanks again for your help.

UFOs - BUFORA REQUEST

Reference:

A. D/DS8/63/5 dated 30 Dec 82

1. In response to the reference you agreed to take part in the BUFORA programme on UFOs subject to satisfactory briefing being provided.
2. I attach at Annex A background briefing setting out the MOD line on UFOs. I also attach Hansard extracts of two oral questions raised in the House of Lords last year and additional Q and A briefing which may be of assistance.
3. If you agree to participate in the interview it would be helpful to obtain advance copies of the questions as proposed by so that detailed responses could be prepared.

Section 40

Section 40

17 Jan 83

DS8

Section 40

1. The sole interest of the Ministry of Defence in UFO reports is to establish whether they reveal anything of defence interest (eg. intruding aircraft). Reports are passed to operations staff who examine them as part of their normal duties. There is no unit within the Ministry appointed solely for the study of UFOs, and no staff are employed upon the subject on a full-time basis.
2. The Ministry of Defence does not deny that there are strange things to see in the sky. It believes, however, that there are adequate material explanations for these - satellite debris re-entering the earth's atmosphere, ball lightning, unusual cloud formations; meteorological balloons, aircraft lights, aircraft at unusual angles etc. It certainly has no evidence that alien spacecraft have landed on this planet. We are aware of independent scientific studies into UFOs, notably the report produced by the University of Colorado in 1969. This concluded that 90% of all UFO reports proved to be plausibly related to ordinary phenomena.
3. In response to demands for publication of UFO reports Viscount Long (in the House of Lords on 7 April 1982) said that he saw no objection to these reports being made public. We are therefore studying the best means of publishing this material. Publication of the reports would help us to rebut the notion that there is a MOD 'cover up' in respect of UFOs.
4. The earliest UFO reports retained by the Ministry of Defence date back to 1962. Prior to 1967, such reports, like other routine papers, were destroyed after five years. The decision to retain these reports instead of destroying them was taken in response to increasing public interest in the subject.

Q and A Brief

Q1. Why are UFO reports referred to the Ministry of Defence?

A1. The Government is not interested in the scientific significance of these phenomena as such. The Ministry of Defence examines UFO reports to determine whether they could be aircraft illegally in UK airspace.

Q2. Why does not the Government set up a proper inter-departmental study of UFOs?

A2. The Government does not consider that there is any justification for the expenditure of public money on such a study.

Q3. Is it not time that MOD recognised that many people have a genuine scientific interest in these phenomena?

A3. The Ministry of Defence does not doubt the genuineness of many people's interest in UFOs. Its own interest, however, is limited to the defence aspect. It is not concerned with the scientific significance, if any, of UFO sightings and could not justify spending money voted by Parliament for defence on matters which fall outside the defence field.

Q4. Why cannot the British Government admit the existence of UFOs like the French Minister of Defence did in 1974?

A4. The French Minister of Defence did not say that UFOs were real. He said that the phenomena were genuine and reported by sensible people. At no time did he say that they were real in the sense of being alien space craft.

Q5. Have any of these sightings ever been identified as a hostile aircraft?

A5. No

Q6. If UFOs do not represent a threat, are not the MOD's investigations simply a waste of time and money?

A6. No. The maintenance of the integrity of UK air space requires that the Ministry of Defence should be satisfied that any unidentified flying object is not an intruding aircraft. This is an elementary precaution and one which takes up very little staff time. No staff are employed solely to examine UFO reports.

Q7. How many UFO reports remain unexplained?

A7. The Ministry of Defence does not investigate reports to a point at which a positive identification can be made.

House of Lords

Thursday, 4th March, 1982.

The House met at three of the clock (*Prayers having been read earlier at the Judicial Sitting by the Lord Bishop of Derby*): The LORD CHANCELLOR on the Woolsack.

British Citizens: Overseas Supplements

Lord Hatch of Lusby: My Lords, I beg leave to ask the first Question which stands in my name on the Order Paper.

The Question was as follows:

To ask Her Majesty's Government how many British citizens received British Expatriates Supplementation Scheme or Overseas Service Aid Scheme supplements in 1979 and in 1981 and what further changes are planned.

The Parliamentary Under-Secretary of State, Foreign and Commonwealth Office (Lord Trefgarne): My Lords, the average number of British citizens receiving British Expatriates Supplementation Scheme or Overseas Service Aid Scheme supplements in 1979 was 4,083. In 1981, the comparable figure was 2,975. The numbers have fallen steadily since 1970 and reductions are expected to continue at about 10 per cent. per annum over the next few years. No changes in terms of service are planned at the moment.

Lord Hatch of Lusby: My Lords, may I ask the noble Lord the Minister whether he has read the Answer given by his colleague to a similar Question which I put in December? The Answer, which I paraphrase, was that the numbers had fallen because local indigenous people had now become sufficiently trained to take those positions. If the noble Lord has looked since at these figures, would he agree that this is not an adequate answer and that this is a deliberate policy by the Government to reduce the number of British citizens who are given supplements to work overseas? Would the noble Lord further agree that this is causing very great difficulty to universities, to technical colleges and to a whole range of national activities in the Commonwealth?

Lord Trefgarne: No, I do not agree with that, my Lords. I have indeed studied the Answer which my noble friend Lord Skelmersdale gave to the noble Lord, Lord Hatch of Lusby, at the end of last year. The reasons which my noble friend then gave remain correct.

Lord Hatch of Lusby: But surely the figures which have been given this afternoon, if I heard correctly, have reduced the number by about 25 per cent. in two years. Does this not entail a great reduction in British influence all over the Commonwealth? And is the noble Lord aware that particularly in universities it is causing very great anxiety and difficulty over the recruitment of the requisite trained staff?

III. 15 M2

Lord Trefgarne: My Lords, the numbers have indeed declined, as I described in the original Answer and as was referred to at the time of the earlier Question at the end of last year. But one has to remember that these schemes are operated in the closest consultation with the various Governments concerned, and they sometimes choose to use the aid funds for other purposes.

Unidentified Flying Objects: Sightings

3.4 p.m.

The Earl of Clancarty: My Lords, I beg leave to ask the Question which stands in my name on the Order Paper.

The Question was as follows:

To ask Her Majesty's Government how many reports have been received by the Ministry of Defence on unidentified flying objects (UFOs) in each of the last four years, and what action has been taken in each case.

Viscount Long: My Lords, in 1978 there were 750 sightings; in 1979 there were 550 sightings; in 1980, 350 sightings; and in 1981, 600 sightings. All UFO reports are passed to operations staff who examine them solely for possible defence implications.

The Earl of Clancarty: My Lords, while thanking the noble Viscount for that Answer, may I ask him whether or not it is a fact that over 2,000 authenticated UFO reports were published last year in the national press? If so, were they accepted or passed on to the Ministry of Defence? And what happened to them?

Viscount Long: My Lords, they did not all get to the Ministry of Defence. I have just informed your Lordships of the numbers sighted. If the noble Earl is suspicious that the Ministry of Defence is covering up in any way, I can assure him that there is no reason why we should cover up the figures which he has mentioned if they are true. The sole interest of the Ministry of Defence in UFO reports is to establish whether they reveal anything of defence interest—for example, a Russian aircraft or an unidentified aircraft—which might have breached our security systems. That is the sole reason why we are interested in the reports.

Lord Wynne-Jones: My Lords, does the Answer given mean that since there has been a Conservative Government the UFOs have done a U-turn and departed?

Viscount Long: Not according to my reading, my Lords.

The Earl of Kimberley: My Lords, as my noble friend said that 600 UFOs had been officially reported or acknowledged by the Ministry of Defence in 1981, may I ask him how many of those sightings still remain unidentified and were not subject to security, or were Russian aeroplanes, or anything like that?

Viscount Long: My Lords, I do not have those figures. They disappeared into the unknown before I got them.

Lord Strabolgi: My Lords, may I ask the noble Viscount whether the present Government adhere to the view of the previous Government which I put forward when I replied to the debate three years ago in your Lordships' House, that most of these so-called sightings can be accounted for as natural phenomena?

Viscount Long: Yes, my Lords, they can be. Many of them are accounted for in one way or another, but nobody has got a really constructive answer for all of them.

Lord Hill-Norton: My Lords, may I ask the noble Viscount whether or not it is true that all the sighting reports received by the Ministry of Defence before 1962 were destroyed because they were deemed "to be of no interest"? And if it is true, who was it who decided that they were of no interest?

Viscount Long: My Lords, my reply to the noble and gallant Lord—I was wondering whether he was going to say that the Royal Navy had many times seen the Loch Ness monster—is that since 1967 all UFO reports have been preserved. Before that time, they were generally destroyed after five years.

Lord Paget of Northampton: My Lords, can the noble Viscount tell us whether, out of these thousands of sightings which he has mentioned, there has been a single one which suggested any menace to our defences? In the circumstances, is not an awful lot of time being wasted on this nonsense?

Viscount Long: My Lords, I think Her Majesty's Government are waiting for an invitation from them to discuss these problems.

Mr. Anatoly Shcharansky: Representations

3.9 p.m.

Lord Renton: My Lords, I beg leave to ask the Question which stands in my name on the Order Paper.

The Question was as follows:

To ask Her Majesty's Government whether they are aware that Anatoly Shcharansky has for the past 15 months been undernourished, tortured and frequently placed in punishment cells, and in October 1981 had his prison sentence increased by 3 years for his refusal to plead guilty to a charge of which he has always maintained his innocence; and whether they will request the Soviet Government to state whether they intend to keep him in those uncivilised conditions until he relents or dies.

Lord Trefgarne: My Lords, Her Majesty's Government remain gravely concerned about the plight of Anatoly Shcharansky and are disturbed by recent reports of his ill-treatment. We have raised this case with the Soviet authorities on many occasions, both

in direct bilateral contact and at the Madrid Review meeting. We shall continue to take a close interest in Mr. Shcharansky's case, and to make representations as suitable opportunities arise.

Lord Renton: My Lords, may I thank my noble friend not only for that Answer but for the action which he and the Foreign Office have been and are taking with regard to Shcharansky's plight? May I ask my noble friend whether or not the Soviet Government's failure, as shown by the treatment of Shcharansky and others, to honour their Helsinki undertakings diminishes their credibility in relation to all other matters in which they say they are seeking agreement and on which they would like to be believed?

Lord Trefgarne: If I may say so, my Lords, my noble friend has put his finger on the nub of the problem. How can we believe what they say in negotiations such as the IMF negotiations, the MBFR negotiations as they are called in Vienna, or in any other forum for that matter, when they do not do what they said they would do at Helsinki in 1976?

Lord Shinwell: My Lords, in view of the rumours, which are probably well founded, that Mr. Brezhnev is about to retire, could a message from your Lordships' House be sent to him through the Soviet Embassy wishing him for the remainder of his life—and we hope he has many years left yet—peace and contentment and asking whether, as a gracious act upon his retirement, he will ensure that Mr. Shcharansky is treated as a civilised person?

Lord Trefgarne: My Lords, I would certainly be willing to send another message to the Soviet Union about Mr. Shcharansky if I thought it would have any effect. As to the future of Mr. Brezhnev, I believe that that is a matter for them to decide for themselves.

Viscount Mountgarret: My Lords, would it not help if the western nations ceased providing wheat to the Soviet Union, at a time when they are finding themselves short, until they cease to carry out such inhuman activities against individuals and sovereign States?

Lord Trefgarne: My Lords, the failure of the Soviet agricultural industry is now plain for all to see, but I am not sure that the interests of the West are served by starving them out.

Lord Elwyn-Jones: My Lords, in view of the fact that the treatment of Shcharansky seems to be a serious violation of human rights, has the matter been raised before the sub-commission on human rights at the United Nations?

Lord Trefgarne: My Lords, I am not certain that the matter has been raised before that particular body but certainly it has been raised before all the others I mentioned. There could be a good opportunity for doing as the noble and learned Lord suggests.

Lord Avebury: My Lords, is the Minister aware that Mr. Shcharansky is a very distinguished computer scientist? Will he therefore consider a reduction in

House of Lords

Wednesday, 7th April, 1982.

The House met at eleven of the clock (*Prayers having been read earlier at the Judicial Sitting by the Lord Bishop of Portsmouth*): The LORD CHANCELLOR on the Woolsack.

UFO Sighting Reports: Security

The Earl of Cork and Orrery: My Lords, I beg leave to ask the Question which stands in my name on the Order Paper.

The Question was as follows:

To ask Her Majesty's Government how many of the 2,250 sightings of UFOs reported to the Ministry of Defence in the years 1978-81 were, and still are, classified for reasons of security.

Viscount Long: None, my Lords.

The Earl of Cork and Orrery: My Lords, I thank my noble kinsman for that Answer. May I ask him two questions? First, what did he mean when he said in his Answer on, I think, 4th March that reports of sightings that were considered to be of interest to defence were in fact classified? Secondly, what procedures may be open to individuals or organisations who would like to see the reports?

Viscount Long: My Lords, with regard to the latter part of my noble friend's supplementary question, there is no reason why he should not come and see the reports. Not many of them come in because not many people actually report sightings. There is no cover up in that respect. As for the first part of my noble friend's supplementary question, I stick to what I said earlier.

The Earl of Kimberley: My Lords, can my noble friend say why, when I previously asked a supplementary question, he said that the figures had got lost on the way to the Ministry, whereas today he says that they are there and available for anyone to see? Can he therefore place them in the Library for all of us to see?

Viscount Long: My Lords, I will look into that and find out whether it is possible for your Lordships to see them. I should like all of your Lordships to see them in the Library, if possible.

Lord Strabolgi: My Lords, may I ask the Government whether they think that any of these UFOs are manned spacecraft coming from a planet outside the solar system, as is believed by the "ufologists"?

Viscount Long: My Lords, the noble Lord can believe that; anything is possible.

Lord Shinwell: My Lords, do I understand that the noble Viscount the Minister in his reply to the original Question does not deny that UFOs exist? Is it possible—I use the word "possible" very carefully, but

deliberately—that all the information is well-known to the Ministry of Defence, but that for diplomatic and other reasons it is not prepared to make an announcement?

Viscount Long: No, my Lords, it is not prepared to make an announcement because it has not got the facts to make an announcement with authority behind it.

Lord Beswick: My Lords, the Question asks about 2,250 sightings. The noble Viscount says that there are very few sightings reported to the Ministry of Defence. Does that mean to say that the figure in the Question is incorrect?

Viscount Long: No, my Lords, it was on the original assumption that there are probably many sightings that are not reported to the Ministry of Defence. That is what I was really referring to. Therefore, at this stage what we have said is that we have got.

Lord Beswick: My Lords, I should like to clear up that point. The Question refers to 2,250 sightings "reported" to the Ministry of Defence. The Question I was asked was, "Is that figure correct, or not?"

Viscount Long: That is correct, my Lords, up to this moment.

Lord Wade: My Lords, may I ask which Ministry is responsible for UFOs?

Viscount Long: None, my Lords. Reports come into the Ministry of Defence, and anyone can take them from there.

Viscount St. Davids: My Lords, has anybody yet found an empty beer can marked, "Made in Centaurus", or any similar object? Until they have, will the Ministry deal with these matters with very considerable scepticism, please?

Viscount Long: My Lords, I am not the Minister for conservation, if it is a question of beer cans.

Lord Morris: My Lords, if something is said to be unidentified, how can it possibly be said to exist?

Viscount Long: A very good question, my Lords.

Lord Leatherland: My Lords, can the Minister tell us whether any of the unidentified flying objects are Ministers who are fleeing from the Cabinet just now?

Viscount Long: No, my Lords.

The Earl of Clancarty: My Lords, may I ask the noble Viscount whether he is aware of a Ministry of Defence document concerning UFOs, which was published in the July 1978 issue of a journal called *Viewpoint Aquarius*? Furthermore, he is aware that under the heading of "Contacts" there were listed 18 names, and alongside each name there was given the town which was the location of the supposed occurrence? There were also given classifications and a date and time relating to each name. Is the noble Viscount aware that there was a

[THE EARL OF CLANCARTY.]

tremendous distribution of the document to other Government departments, and to NORAD and the CIA? I should like to ask whether in this case the word "contacts" means close encounters?

Viscount Long: Yes, my Lords, I have the document here, and it has nothing to do with the Ministry of Defence. It is made up to look rather like a Christmas menu. Its existence in the Ministry of Defence has been denied on television. Someone else has made it up. It is not a Ministry of Defence document—not the way it is made up, like a Christmas menu.

~~Home Forces: Recruitment Campaign~~

11.7 a.m.

The Earl of Kimberley: My Lords, I beg leave to ask the Question which stands in my name on the Order Paper.

The Question was as follows:

To ask Her Majesty's Government whether they will ensure that a robust publicity campaign is launched about their proposals for the new Home Service Force, the expansion of the Territorial Army, and the new Teenager Training Scheme.

The Earl of Avon: My Lords, a campaign to publicise the Youth Adventure Scheme is already in progress, and appropriate action to publicise the Home Service Force is in hand. There are already periodic recruiting campaigns for the Territorial Army.

The Earl of Kimberley: My Lords, may I thank my noble friend for that Answer? I wonder whether he can enlarge upon it a little and say whether the Royal Naval Reserve is being increased? Perhaps we shall be in dire need of them very shortly. Can he perhaps give some firm figures for the Territorials?

The Earl of Avon: My Lords, I understand that the Royal Naval Reserve stands at 5,361 and the Marines at 1,089, and these figures are close to the total strengths. The Territorial Army has had some very satisfactory recruiting figures since May 1979. They have increased in strength from 59,000 to 71,000.

Lord Molloy: My Lords, can the noble Earl tell the House whether there have been any amendments to the Teenager Training Scheme, in order to rid it of those elements that are redolent of industrial conscription?

The Earl of Avon: My Lords, so far as I know, there has been no amendment to the scheme.

Lord Harmar-Nicholls: My Lords, with regard to publicity, is my noble friend making full use of television, through both advertising and news and documentary programmes, in order to bring the schemes to the attention of possible recruits?

The Earl of Avon: My Lords, so far as the Youth Adventure Scheme is concerned, it started only a week

ago, and whether it will require more or less publicity will depend on how it is received. With regard to the Home Service Force, it is to be a pilot scheme, and no such publicity is envisaged at the moment.

Lord Molloy: My Lords, is the noble Earl aware that in our previous discussions on the Teenager Training Scheme it was pointed out that if a teenager did not accept the conditions, such as the £15 a week, his punishment would be that he could not receive any form of unemployment benefit? As I understand it, the Government were going to look at that aspect and possibly remove its ugliness.

The Earl of Avon: My Lords, I am sorry, I did not understand the noble Lord's first question. Of course, we are talking about different things. This is the Youth Adventure Scheme, which is a two-week scheme and has nothing to do with the one to which he refers, which, I am afraid, is wide of the Question.

Baroness Wootton of Abinger: My Lords, is not the teenager training scheme included in the noble Earl's Question?

The Earl of Avon: No, my Lords. This is the Youth Adventure Scheme, which is a fortnight's scheme. This is not the scheme to which the noble Lord, Lord Molloy, is referring.

~~Pension Payments to Britons Living Abroad~~

11.10 a.m.

Lord Mackie of Benshie: My Lords, I beg leave to ask the Question which stands in my name on the Order Paper.

The Question was as follows:

To ask Her Majesty's Government why British pensioners who have paid their full contribution during their lifetime but are now living abroad do not receive the increases in the pension and why the Government allow this to continue.

The Parliamentary Under-Secretary of State, Department of Health and Social Security (Lord Trefgarne): My Lords, the general position is that British pensioners abroad receive their pensions at the rate which was in force when they left this country, or, if they were already abroad, at the time when they first qualified. Subsequent increases are payable only where this is provided for either under EEC regulations or under a bilateral agreement on social security between the United Kingdom and another country. To pay increases other than in these cases would cost about £113 million a year, and we have no plans to do so.

Lord Mackie of Benshie: My Lords, I thank the Minister for that Answer, but is the reason not a little unjust? Does he not agree that, if British people have paid the money, they deserve to get the same pension wherever they are living? Surely it is a little unjust for the Government to collect this money, which is what they are doing, simply because these people live abroad?

REPORT OF AN UNIDENTIFIED FLYING OBJECT

2/3

A. <u>Date, Time and Duration of Sighting.</u>	27 Feb 82 0030Z 15 minutes
B. <u>DESCRIPTION OF OBJECT</u> (Number of objects, size, shape, colour, brightness)	One large object, red flashing lights on the top.
C. <u>EXACT POSITION OF OBSERVER</u> (Location, indoor/outdoor, stationary, moving)	Indoors.
D. <u>HOW OBSERVED</u> (Naked eye, binoculars, other optical devices, still or movie)	Naked eye.
E. <u>DIRECTION IN WHICH OBJECT FIRST SEEN</u> (A landmark may be more useful than a badly estimated bearing)	Hovering over houses in Eastern Avenue North, Northampton.
F. <u>ANGLE OF SIGHT</u> (Estimated heights are unreliable)	Approx 60°.
G. <u>DISTANCE</u> (By reference to known landmark)	300 yards.
H. <u>MOVEMENTS</u> (Changes in E, F and G may be of more use than estimates of course and speed)	Moved from left to right and right to left, eventually moved off slowly.
J. <u>MET CONDITIONS DURING OBSERVATIONS</u> (Clouds, haze, mist etc)	Not known.

K. <u>NEARBY OBJECTS</u> (Telephone lines, high voltage lines, reservoir, lake or dam, swamp or marsh, river, high buildings, tall chimneys, steeples, spires, TV or radio masts, airfields, generating plant, factories, pits or other sites with flood lights or night lighting)	Not known.
L. <u>TO WHOM REPORTED</u> (Police, military, press etc.)	Police Station, Campbell Square, Northampton.
M. <u>NAME AND ADDRESS OF INFORMANT</u>	Section 40 Northampton.
N. <u>BACKGROUND OF INFORMANT THAT MAY BE VOLUNTEERED</u>	Housewife.
O. <u>OTHER WITNESSES</u>	Not Known.
P. <u>DATE AND TIME OF RECEIPT</u>	AF Ops 271515Z Feb 82
Q. <u>ANY UNUSUAL METEOROLOGICAL CONDITIONS</u>	No
R. <u>REMARKS</u>	Object appeared to be attracted by a particularly large TV aerial on one of the houses.

REPORT OF AN UNIDENTIFIED FLYING OBJECT

2/3

- A Date, time and duration of sighting (Local times to be quoted)
21/2/82 2130 - 2215 + 3 other occasions in the previous 2 months.
- B Description of object (Number of objects, size, shape, colours, brightness, sound, smell, etc).
Flashing lights, red + green, but stationary.
- C Exact position observer (Geographical location. Indoors or outdoors. Stationary or moving).
Standing outside Public House in Brenchley, near Tunbridge Wells. WALNUT TREE.
- D How observed (Naked eye, binoculars, other optical device, still or movie camera).
Naked eye
- E Direction in which object was first seen (A landmark may be more useful than a badly estimated bearing).
In the direction of Gatwick, but a little to the South.
- F Angle of sight (Estimated heights are unreliable).
10°
- G Distance (By reference to a known landmark wherever possible).
A few miles
- H Movements (Changes in E, F and G may be of more use than estimates of course and speed).
The lights remained stationary, + disappeared after 3/4 hr.
- J Meteorological conditions during observations (Moving clouds, haze, mist etc).
Clear weather on all occasions
- K Nearby objects (Telephone lines; high voltage lines; reservoir, lake or dam; swamp or marsh; river; high buildings, tall chimneys, steeples, spires, TV or radio masts; airfields; generating plant; factories, pits or other sites with flood-lights or other night lighting).
- L To whom reported (Police, military organisations, the press etc).
ATC GATWICK.
- M Name and address of informant
Section 40
N T. WELLS. KENT.
- N Any background on the informant that may be volunteered
?
- O Other witnesses Section 40
THE GARMAN.
- P Date and time of receipt of report
ALL HIS CUSTOMERS
21/2/82 2355Z.
- Q To a reply requested?
YES

REPORT OF AN UNIDENTIFIED FLYING OBJECT

Section 40

A. Date, time and duration of sighting. (Local times to be

13 0850 Jan 81 1-2 mins.

B. Description of object. (Number of objects, size, shape, colour, brightness, sound, smell, etc).

Spherical - lunar module shape. Whitish-yellow with reddish glow at rear (similar to lightning afterburn) 19/1

C. Exact position observer. (Geographical location. Indoors or outdoors. Stationary or moving).

52° 41' N 01° 41' E

Yarmouth net office Outdoors. Stationary.

D. How observed. (Naked eye, binoculars, other optical device, still or movie camera).

N/E

E. Direction in which object was first seen. (A landmark may be more useful than a badly estimated bearing).

150° from office

F. Angle of sight. (Estimated heights are unreliable).

1,200' - 3000'

G. Distance. (By reference to a known landmark wherever possible).

H. Movements. (Changes in E, F and G may be of more use than estimates of course and speed).

Mvt. from 150° to 330°. Speed comparable to helicopter, but silent.

I. Metereological conditions during observations. (Moving clouds, haze mist etc).

Calm, sunny. -4.4°C. Visibility 4000 m. No haze

K. Nearby objects. (Telephone lines; high voltage lines; reservoir, lake or dam, swamp or marsh; river; high buildings, tall chimneys, steeples, spires, tv or radio masts; airfields; generating plant; factories, pits or other sites with flood-lights or other night lighting).

No tall buildings

L. To whom reported. (Police, military organizations, the press etc).

RtF. Neat^{is}head

M. Name and address of informant.

Section 40

c/o Met. Stn.
Gt. Carmouth, Norfolk

N. Any background on the informant that may be volunteered.

Qualified. Used to dealing with net balloons. Object not a balloon

O. Other witnesses.

2 - both employees of Met Office

P. Date and time of receipt of report.

REPORT OF AN UNIDENTIFIED FLYING OBJECT

A. Date, time and duration of sighting. (Local times to be quoted).

Section 40

07 1500 DEC 81

10 sec

B. Description of object. (Number of objects, size, shape, colours, brightness, sound, smell, etc).

No light; 2 ft. long; 18 ins wide; similar in shape to an inverted meat dish with arm capable of moving from underneath to top about 18 ins long. Underneath had 8 discs spread equally with two

C. Exact position observer. (Geographical location. Indoors or outdoors. Stationary or moving).

Carr park, Wolverhampton Hospital.

transverse lines
along base

D. How observed. (Naked eye, binoculars, other optical device, still or movie camera).

N/E

E. Direction in which object was first seen. (A landmark may be more useful than a badly estimated bearing).

Above casually ward.

F. Angle of sight. (Estimated heights are unreliable).

40-50 ft. 85° from horizontal

G. Distance. (By reference to a known landmark wherever possible).

About 50 ft above ward

H. Movements. (Changes in E, F and G may be of more use than estimates of course and speed).

horizontal plane, slowly dropped to left, raised extension arm and then moved to left across campark.

I. Metereological conditions during observations. (Moving clouds, haze mist etc).

Overcast but good visibility

K. Nearby objects. (Telephone lines; high voltage lines; reservoir, lake or dam, swamp or marsh; river; high buildings, tall chimneys, steeples, spires, tv or radio masts; airfields; generating plant; factories, pits or other sites with flood-lights or other night lighting).

Hospital chimney in car park - gun-gout smoke - Object below smoke

L. To whom reported. (Police, military organisations, the press etc).

Cosford ATC

M. Name and address of informant.

LORDS DEBATE ON UFOs : 18th JANUARY 1979

Thank you for your minutes D/S4(Air)/8/3 of 15th and 16th January forwarding a revised draft of the speech for Lord Strabolgi and additional background information respectively.

// 2. I have discussed the revised speech with Lord Strabolgi and have made further - largely editorial - amendments. I attach a copy of a letter which I handed to Lord Strabolgi last night together with a fresh copy of the speech itself. Lord Strabolgi will be reading the speech again today and will let me know as soon as possible whether he wishes to have the briefing meeting which you and **Section 40** have pencilled in for 1130 tomorrow.

3. You might like to know that the debate is causing a fair amount of interest in the House of Lords. In addition to the Earl of Clancarty others taking part will include (in the following order) Lord Trefgarne, the Earl of Kimberley, Viscount St Davids, Lords Rankeillour, Kings-Norton, Gladwyn and Hewlett, the Bishop of Norwich, Earl Halsbury and Viscount Oxfuird (who will be making his maiden speech).

4. We will not know for certain when the UFO debate will start. It depends, of course, on how long the earlier business takes, but it is unlikely to start before 1800. We will keep in touch with the House of Lords throughout the course of tomorrow afternoon and early evening and we will let you know as soon as we are needed. The debate is likely to last for between two and three hours.

/5.

16th January 1979

Section 40

Following the meeting which you held with Mr **Section 40** and myself on Friday 12th January the draft speech for you to make in response to the Earl of Clancarty's Unstarred Question on Thursday 18th January has been amended. I attach a folder containing the revised version which follows the line which you agreed.

I also attach a more detailed background note, and, as you requested, the transcript of the BBC television programme on UFOs in which the Earl of Clancarty appeared and in which a **Section 40** was interviewed and alleged that she had been told by telephone to say nothing about her alleged sighting of a UFO. I do not suggest, unless you particularly wish to do so, that you read the transcript; but the parts in which you expressed an interest are on pages 23 and 24 **Section 40** and pages 26 - 29 (Lord Clancarty).

When we spoke on the telephone yesterday you stressed the need for your speech to touch on Lord Clancarty's reference to Monsieur Galley's attitude to UFOs. This is covered briefly in the paragraph at the bottom of page 10. I attach, as you requested, a copy of the actual transcript of the interview with M. Galley.

The Box party for Thursday's debate will be **Section 40** **Section 40** and myself.

Yours sincerely,

Section 40

Private Secretary

DI55 - Section 40
Ops(GE)2b(RAF)

Placed opposite is a draft closing address for the Lords debate on UFOs, and a Background Note; due at your office by 12 January 1979.

2. There is a temptation to equivocate about UFOs because of the thought that we might one day make contact with people from distant stars. However, there is nothing to indicate that ufology is anything but claptrap and no evidence at all of 'alien space craft'. The UFO industry has prospered from equivocation and, with 1979 being heralded as 'the year of the UFOs', it seems very proper for HMG to inject some massive common sense into the business and come out with an equivocal attack on ufology. With the impact of the film "Close Encounters of the Third Kind", and the increasing efforts of the UFO industry and increasing publicity given to its exponents, quite sensible people may begin to wonder whether there might not be something in ufology, on the "where there's smoke there's fire" principle. Less sensible people may be increasingly confused and perhaps even worried, to the increasing profit and encouragement of the UFO industry. The subject will not go away, the Department and probably Ministers are likely to find themselves increasingly involved and under pressure for formal statements; and the popular and UFO press are likely to make all the mileage they can out of the Lords Debate, particularly if there are signs of equivocation or phrases that can easily be misrepresented.
4. Accordingly it is strongly recommended that the Government take an unequivocal and uncompromising line.

UNCLASSIFIED

RESTRICTED

UNCLASSIFIED

arisen because the FCO has

5. A small difficulty has[^] for purely tactical reasons unconnected with UFOs, acceded (with other countries) to a request by the Government of Grenada for a UN study group (at Grenadan expense) to monitor information on UFOs. The wording of that part of the draft speech has been supplied by FCO.

6. The general line adopted is that there really are strange phenomena in the sky, but there are perfectly rational explanations to account for them, so there is no need to introduce the highly questionable hypothesis of alien space craft. In other words, Occam's Razor.

7. The broad line was put to Lord Strabolgi at our meeting in December and agreed by him. Lord Strabolgi asked for further information about cosmic distances and the difficulties of space travel. I have not included this in the speech, because Lord Clancarty's "sky people" are evidently "paranormal" and can cross the light years in a trice; but some facts are included at the end of the background note.

8. Lord Strabolgi also mentioned the possibility of replying on any detailed cases produced by Lord Clancarty if the latter will give advance notice. I repeat the advice I gave in December: we should not attempt to argue these cases, which tend to be remote and elusive yet often cannot be refuted without very detailed examination; indeed we should not fight the battle on Lord Clancarty's ground at all.

9. DES have been consulted and are content.

10. You will no doubt confirm the time and place of the final briefing, which at present we have down for am Wednesday 17 January.

US of S(RAF) has considered the draft closing address. Whilst he would not disagree with the general line taken, and whilst he accepts the need for an objective approach towards this subject, he feels that the current draft would benefit from being toned down so as not to pour quite so much scorn on 'believers'.

UFOS - DEBATE IN THE LORDS

I enclose a first draft of a proposed concluding speech for Lord Strabolgi in the Lords' debate.

2. The draft tries to take account of the points made to us on Thursday by Lord Strabolgi. However, on starting to re-read the Earl of Clancarty's book 'Mysterious Visitors' I have appreciated more fully how heavily the Earl has hedged his bets about space travel: indeed he suggests that the 'sky people' are 'paranormal' and come from 'another space/time dimension'. I do not recommend trying to track the Earl through other dimensions, and suggest we stick to the bare essentials that we proposed to Lord Strabolgi - that there are plenty of phenomena, that there are perfectly sensible explanations for them, and that the explanations offered by ufology are unnecessary and prove idiotic under critical examination.
3. I would be grateful for any recent recorded cases to cover the parts of para 6; otherwise I shall draw on the Condon Report and Klass (the anti-UFO investigator).
4. Clancarty is likely to produce some 'documented and fully authenticated cases'. I would like to be able to demolish one as an illusion. I have provisionally chosen the disappearance of the Norfolk Battalion at Gallipoli, which Clancarty quotes in one of his books: Hd of Army Historical Branch says that this is a 'regular', about which the facts can be produced.
5. I would be grateful for comments, criticisms and additional arguments or cases. At this stage I am particularly anxious to know whether you agree to the main line of arguments. Because time is short I would be grateful for telephone comments.
6. The present draft is about 2,000 words, around 15 minutes.
7. I have copied this minute to ACS(G)(RAF), and I would be grateful for his comments on the general line of argument.

UFOs - DRAFT CLOSING ADDRESS

There are three grains of truth upon which the great myth of ufology is built.

FIRST: intelligent life could exist elsewhere in the universe. With 100,000 million stars in our own galaxy alone, it is probable that there are many planets capable of supporting life.

SECOND: the technical difficulties of inter-stellar travel are stunning. Even at the speed of light it would take 4 years to reach the nearest star, and 100,000 years to cross our galaxy. But it would be a brave man who said there could never, ever, be manned inter-stellar travel.

THIRD: there really are strange phenomena in the skies, and many are reported by cool and intelligent people.

2. But it is a far cry from this to the proposition that there have been great numbers of sightings of UFOs - implying alien space craft - sometimes claimed as running into hundreds of thousands. Her Majesty's Government is not in the least impressed with the idea that there is anything worth investigating in the information offered by ufologists.

3. On the one hand, there are perfectly simple explanations for the phenomena; on the other, the explanations offered by ufologists are most unconvincing. These explanations are unconvincing when they relate to space craft from other stars: they are even more unconvincing when they claim that UFOs come from another space-time dimension, from a hole in the earth, or the depths of the sea, as Lord Clancarty has suggested.

4. Let us first consider the phenomena. There have always been strange things to see in the sky, and strange explanations have been given. Since World War II we have seen development of powerful rockets, and voyages to the Moon and planets. We have also seen the development of science fiction, where space ships can be switched to 'inter-stellar drive' and our hero can ~~come~~^{cross} the 2M light years to Andromeda Galaxy in a flash. We have also seen the development of ufology and the UFO industry, which accepts the delightful fantasies of science fiction as proven fact and interprets the phenomena in our skies as alien space craft. Most of the phenomena are seen unexpectedly and very briefly, and are gone before the eye has focussed. The words 'UFO' and 'space craft' have been firmly implanted and too readily spring to mind.

6. But what are the real causes of the phenomena?

a. Some have always occurred: tricks of light on cloud; comets, meteors or showers of meteors; meteorites; bright planets, or even the moon or stars in unusual atmospheric conditions. Venus is popular: there are recorded cases of pilots reporting Venus as an 'unidentified flying object following them'.

b. Meteorological balloons. The Met Office alone release 50 a day, which expand to 40 foot diameter and rise to 100,000 feet and can be lit by the sun well after dark. Many other organisations use balloons, some are much larger, and there are recorded cases of balloons being reported as UFOs by airline pilots.

- c. Meteorological searchlights shine on clouds: you cannot see the beam, only a light apparently dancing in the sky.
- d. A surprising number of reports relate to aircraft seen in unusual conditions at unusual angles, some very high, some at low level. One recent 'UFO' was confidently reported on local radio: we cannot prove that it was not a 'UFO', but we do know that an RAF Vulcan bomber on a low flying mission passed the same spot at the same time and on the same course as the reported UFO.
- e. And satellites: there are some 5000 listed objects in orbit, satellites and space debris. More are added each year, and about 600 re-enter the atmosphere every year. Early this year MOD received many reports of a large piece of debris re-entering across the South of England: most reports were factual, but one spoke of an 'oval shaped thing with a white cockpit which hovered for a while then shot off at great speed'. We cannot prove it wasn't a UFO, but it occurred at the same time and place as some known re-entry of space debris.
2. 7. And of course there are optical illusions. Any phenomena seen through glass are particularly suspect.
8. There are also genuine hallucinations, sometimes on people under stress; the excited tales of the gullible; the embellishments of the born story teller. Also, I fear, downright lies. There are also hoaxes: there are some very effective aerial hoaxes which have been perpetrated by children - which I will not describe for fear of precipitating a new rash of UFO reports.

9. In sum, we cannot prove that all or even most of these so-called sightings were not UFOs. But we can say that there is a great variety of phenomena in the skies for which there are perfectly ordinary explanations. We have no reason to believe that the so-called UFOs are attributed to anything but these same causes.

10. But what of these famous arrivals of UFOs, claimed to be fully documented and authenticated by many witnesses. On scrutiny they tend to be elusive. I will select one, which Lord Clancarty has described in his book Mysterious Visitors as 'one of the most remarkable and unexplained mysteries of modern times'. He claims that during the Gallipoli campaign in 1915, an entire British regiment, the First Fourth Norfolks, was advancing towards Hill 60: a cloud descended and picked up the regiment and it was never heard of again (checking with Army Historical Branch)

11. As I have indicated, there is no criticism of those who accurately report phenomena. The criticism is of over-readiness to call them 'UFOs', and to transpose that into 'alien spacecraft'. The reports are passed without critical scrutiny to the ufologists; who add^{them} without critical scrutiny, to their huge files of 'reported sightings and landings'.

12. I am sure no-one will deny that - at the least - there are possible rational explanations for the phenomena. Let us now look at the other side of the coin, the range of explanations offered by Lord Clancarty and other ufologists - it is a wide and confusing range, for there are as many different explanations as there are ufologists.

13. Lord Clancarty has been reported as claiming there have been some 80,000 sightings. Other ufologists would put the figure even higher. Now, there is a strange thing about these huge numbers. To put it in simple terms: either these 'space people' prefer to keep out of the way, or they don't. If they prefer to keep out of the way, we must assume that the number of 'sightings' is a tiny proportion of the actual UFO 'sorties', which must run into millions. If they don't one would expect some unmistakable appearances.

14. But let us look at their strange track record:

a. Not a single artefact has been produced - not a single extra-terrestrial chap has dropped an extra-terrestrial spanner, no bent pieces, no prange from perhaps millions of sorties, no nothing. Lord Clancarty has an answer: the CIA has hidden them all.

b. There is no correlative evidence on radar of this huge number of movements.

c. There has been no radio contact (far easier than space travel) and no evidence on radio.

d. There have been no convincing photographs, in these days when so many people carry cameras.

d. There has been no approach to Governments, and no direct knowledge of UFOs by Governments. Lord Clancarty has an answer: there is a great inter-Governmental conspiracy of silence, initiated by the CIA.

15. The idea of the inter-Governmental conspiracy of silence is at once the most astonishing and the most flattering claim of all. On so few things can the Governments of the world agree unanimously, but they have all supposedly agreed to conceal the evidence of UFOs from their peoples. Let me assure this House that Her Majesty's Government has never been approached by people from outer space.

16. There is no internal consistency about the idea of this huge number of sightings. If they have come from another solar system, what is the point of this huge number of visits to our planet, to no apparent purpose? At best it seems wasteful. This was once explained by the claim that aliens had advance bases the other side of the moon. When that became untenable the bases were assumed to be on another planet in our solar system. As that has become untenable ever more fantastic explanations are advanced. In a recent TV broadcast Lord Clancarty claimed that the UFOs are based in a great hole in the earth. Elsewhere he has claimed that they have bases in remote parts of South America, or in the depths of the oceans. Because these physical places have become untenable he has claimed that (I quote): 'UFOs are paranormal, that is from invisible universes'. They come from 'other space-time continua'. Another ufologist talks of 'space mind/full mind/Mana'. Indeed the explanations get more and more fantastic, and more and more incapable of either proof or disproof.

17. The most telling argument of all is that the scientific community is unmoved by the claims of ufology. A visitor from outer space - or from another space time continuum^{um}, or the depths of the sea, or anywhere else they are supposed to be hiding - would be^{one} of the greatest events in human history, and the greatest scientific event. You would expect serious and sensible scientists to be devoting much time and effort to making contact with these supposed space people. The scientific community is as unimpressed as the Government. If the ufologists claim that the Government has gagged the scientific community, it would be as amazing as the alleged conspiracy of silence between Governments.

18. One could go on indefinitely trying to chase the elusive - indeed devious - arguments of the ufologists. Yes, there has been an increase in the number of 'sightings' reported to the Government: the biggest upsurges occurred when the BBC put out a programme on UFOs, and when the Daily Express launched a campaign in connection with the film premiere of 'Close Encounters of the Third Kind'. No, the Government is not in the least concerned by the increases. [As has been said] Grenada is financing a study into UFOs, and the United Nations has, in a moment of casualness, given that study a vague sort of recognition, and one or two other countries have offered to contribute reports. Her Majesty's Government, if it contributes at all, will contribute on the lines of my speech.

19. There are tens of thousands of strange things to see in the sky. It has become fashionable to call these things 'UFOs'. There are perfectly sensible explanations for these sightings. The ufologist explanations are not sensible at all. In 1968

a comprehensive study on UFOs conducted for the ^SUN Government
by the University of ^{Colorado} California concluded that 'nothing has
come from the study of UFOs in the past 21 years that has
added to scientific knowledge'. Ufologists may, if they wish,
continue to believe that Governments and scientists alike are
engaged in a massive cover-up. However, perhaps our debate
will help confirm in some other peoples minds ufology may be
pleasant fantasy but has nothing to do with truth.

*The mind once is adapted to fit
preconceived ideas, it should be
the other way around.*

Herewith a copy of our proposed article on unidentified flying objects
for your information. Section 40 of HdS4 has a similar copy for
his information.

Section 40

Assistant Editor

(1)

It seems scarcely credible that life is a phenomenon unique to the planet Earth. Unmanned probes to Mars and Venus suggest that the rest of the solar system is indeed barren, but planetary systems are ~~known~~^{thought} to be a fairly common phenomenon throughout the universe.

In the Milky Way galaxy itself, of which the solar system is a part, there are at least 100,000 million stars. Optical telescopes, probing to the farthest visual limits of the universe, can resolve about 1,000 million galaxies, the most remote being some 5,000 million light-years away, receding ever further from us at 90,000 miles a second.

So to compute the total number of stars in the visible universe, you would have to multiply the number of stars in a single galaxy (100,000 million) by the number of galaxies (1,000 million) - and that is a lot of stars. Even if planetary systems are far less common than is believed, there must be literally millions of them out there, and in a high proportion ~~of them~~ at least one planet is likely to be capable of supporting life.

Does this mean that UFOs (Unidentified Flying Objects) are now being taken seriously by scientists and the aviation world? In other words, have flying saucers become legit?

UFO reports are always examined by Ministry of Defence scientists. In 1976 they checked about 200 sightings, but the screening of Close Encounters of the Third Kind has apparently resulted in an upsurge of invading flying saucers, with 300 occurrences reaching the boffins' desks in 1978.

No one will deny the occurrence of unidentified flying objects, but this designation is not simply a euphemism for flying saucers. An object may^{well} be unidentified initially, but that doesn't mean it will stay unidentified.

(2)

A number of these sightings are accompanied by colourful accounts of meetings with extra-terrestrial beings and even rides in flying saucers. There was, for example, the Spanish-speaking (!) spaceman who accosted Salvador Medina in Mexico in 1953, not to mention the tall blond Venusian who took Elizabeth Klarer for a ride in a flying saucer in 1956 in South Africa.

The late unlamented George Adamski, apparently a con-man on the grand scale who may eventually have even conned himself into believing his own improbable accounts, claimed ~~to have~~ ^{to have} voyaged in ~~the~~ space aboard saucers, but as Philip Morrison points out in UFO's: A Scientific Debate (Cornell University Press, 1972) he employed as a frontispiece in ~~one~~ of his books a picture of a Sears Roebuck chicken brooder! And then there is Brinsley Le Poer Trench, who claimed in (of all things) Royal Air Force Flying Review for July 1957 that flying saucers were 'interplanetary', and then published a book in 1974 (Secrets of the Ages, Souvenir Press) ~~that they came from inside the Earth~~ ^{that they came from inside the Earth}, expounding at the same time the theory that US polar aviator Richard E. Byrd flew down a 'hole at the pole' into the interior of the Earth!

Disregarding these impossibly outlandish supposed encounters, there remain a number of sightings, often supported by photographic evidence, which are a good deal less spectacular and hence rather more plausible. Many of these incidents have been recorded by highly qualified observers, some of whom are employed in aviation, so their reports are not to be casually dismissed.

So what are the chances of an alien civilisation sending its space ships to Earth?

First of all, the solar system itself appears to be devoid of life, save on the Earth itself.

Soft-landers on Mars, the most likely location for extra-terrestrial life, have failed to disclose ^{any} positive indication of living organisms - and there certainly aren't any canals.

Venus now appears to be a furnace with a surface temperature of 475°C , an atmospheric pressure 100 times that of the Earth's, and sulphuric acid clouds floating on a 55-kilometres deep blanket of dense carbon dioxide; any suggestion that this planet's dense atmosphere shrouds a prehistoric landscape on which primitive life forms ~~were~~ ^{are} beginning to evolve has been smartly discounted, and 'Venusians' are definitely non-starters.

None of the other planets in the solar system are a likely home of life. Mercury is too hot on one side and too cold on the other (as well as having virtually no atmosphere), the giant planets are very cold and may well lack conventional solid cores, and far distant Pluto is not only remote, dark and cold, but also less than half the size of the Earth.

It seems, then, that any space ships reaching the Earth must come from the planetary systems surrounding other stars. At once the vast distances of the universe become a significant factor: light travelling at 186,000 miles a second takes four years to reach the Earth from the nearest star, Proxima Centauri, and from the farthest limits of the known universe it takes 5,000 million years, having started its journey before the Earth was even born.

The chances of just one space ship, drifting among 1,000 million galaxies, stumbling on the tiny planet Earth is considerably less than the prospect of a man locating a single specific grain of sand in the middle of the Sahara.

Time is another significant consideration. Modern man himself is perhaps a million years old, civilisation on Earth only 5,000 years old. The likelihood of two advanced technologies existing in planetary systems sufficiently

near each other in our galaxy for communication to be even remotely possible is small indeed.

Astronomer Patrick Moore has illustrated this by imagining a darkened hall in which two lamps are installed. If each lamp is switched on at random for 10 seconds a day, the chances of them both being on at the same time is comparable to the likelihood of two civilisations existing simultaneously in adjacent planetary systems.

It ~~may~~ looks as though the prospect of even one extra-terrestrial vehicle finding the Earth at the precise point in its history when an advanced technological civilisation has arisen there is astronomically long odds against. And the reported sightings of UFOs down the years number thousands.

Can we therefore find more plausible ~~explanations~~ ^{explanations} for UFOs?

The answer is an unqualified yes. ~~Known natural phenomena~~
Careful analysis of UFO sightings has resulted in many being ~~attributed~~ ^{attributed} to ball lightning (a football-shaped incandescent mass that ~~is~~ ^{is not} yet ~~fully~~ ^{fully} ~~understood~~ ^{understood}), sun dogs (reflections of the sun's disc from cloud-borne ice crystals with their facets all orientated in the same plane), or components of artificial satellites and launch vehicles burning up as they re-enter the atmosphere (for example, the new year's eve UFO reported over the UK on December 31 1978 was almost certainly a launcher from the Russian COLOS 1086 satellite re-entering).

The planet Venus has frequently been mistaken for a flying saucer, especially when it appears near the horizon in the half-light of dawn and dusk, and aircraft lights are a common source of UFO reports (a low-flying Vulcan ~~was~~ ^{last} ^{seen} ^{at} ^{Radio} ^{Leeds} ^{last} ^{spring} ~~the~~ ^{one} such account broadcast on ~~radio~~ ^{radio} ~~station~~ ^{station}), the aircraft's flight schedule and course corresponding exactly with the reputed UFO). There are also ~~extraneous~~ meteorological balloons, which may

after night has fallen

be 40 feet in diameter and reflect the sun from their canopies as they ascend to heights of as much as 100,000 feet, ^{and} a host of natural phenomena such as St Elmo's Fire, the Aurora Borealis and the 'green flash' that sometimes occurs just as the setting sun sinks below the horizon.

The list of possible explanations for UFOs is almost unlimited: flares released by aircraft, short condensation trails lit by the sun after dusk, meteorological searchlights, lights on distant towers, car lights in far-off hills - all have been mistaken for flying saucers at some time or other.

~~With~~ Positive radar responses from alleged UFOs are sometimes cited as evidence ~~for~~ that there is ~~the~~ 'something out there', but false reflections of radar beams are a well known occurrence, and during the much-publicised appearance of UFOs over New Zealand last December the atmosphere in the area provided classic conditions for the propagation of spurious radar echoes.

With such an astonishing diversity of feasible natural explanations, it seems unnecessary to invoke such an obscure, remote possibility as the arrival of alien space craft, for the existence of which there is no concrete evidence. Not once in its 30 years of operation has the huge radio-telescope at Jodrell Bank located anything that could not be attributed to some conventional phenomenon.

There is an entirely understandable desire to find something more significant in human existence than mere life and death on ~~the~~ ^{our} tiny planet. This has led in the past to the development of mystical religions and our Victorian great-grandparents' enthusiasm for ghost stories. Perhaps one of its modern manifestations is a persistent desire to believe in visitors from outer space and flying saucers.
